QUESTION 1

An integration developer needs to perform an iteration over an array of elements using the Fan Out - Fan In primitives.

Where in the Service Message Object (SMO) can the integration developer find the data of each occurrence of the repeating element?

- A. In the body section.
- B. In the user context section.
- C. In the shared context section.
- D. In the primitive context section.

Correct Answer: C

QUESTION 2

An integration developer is designing a business object map and must use Java code to set the value of a particular output element. The Java code does not use any input values. It sets the output value based on the current date and time and an internally generated number. Which transform type would be most appropriate for this situation?

- A. Custom
- B. Custom Java
- C. Custom Assign
- D. Custom Callout

Correct Answer: C

QUESTION 3

An integration developer is developing a mediation flow component that has an adapter configured to communicate with the SAP system. What is the technology used by the WebSphere adapters to introspect/ look inside the EIS?

- A. Enterprise Data Discovery (EDD)
- B. Enterprise Object Discovery (EOD)
- C. Enterprise Service Discovery (ESD)
- D. Enterprise Metadata Discovery (EMD)

Correct Answer: D

QUESTION 4

An integration developer is developing a mediation flow component using a Policy Resolution primitive.

If an exception occurs during the processing of the input message, which terminal propagates the input message?

- A. out terminal
- B. fail terminal
- C. exception terminal
- D. policyError terminal

Correct Answer: B

QUESTION 5

The integration developer has an existing mediation flow that was developed using WebSphere Integration Developer V6.2. The developer would like to take advantage of functionality in new mediation primitives of WebSphere Integration Developer V7.0 to enhance the mediation flow design. What should the integration developer do to migrate project artifacts from WebSphere Integration Developer V6.2 to WebSphere Integration Developer V7.0? From WebSphere Integration Developer V6.2, export the artifacts:

- A. into a JAR file. Import the JAR file into the WebSphere Integration Developer V7.0, which will automatically migrate the project.
- B. as an EAR file. Import the EAR file into WebSphere Integration Developer V7.0, which will automatically migrate the project.
- C. into a Project Interchange (PI) file. Import the PI file into WebSphere Integration Developer V7.0. Then use the migration wizard to complete the process.
- D. into an Eclipse Product. Import the Eclipse file into WebSphere Integration Developer V7.0. Then use the migration wizard to complete the process.

Correct Answer: C
