QUESTION 1

According to SOA principles, which of the following BEST describes the interaction between services?

- A. Services are integrated and mediated by service modules.
- B. Services are integrated and mediated by an enterprise service bus.
- C. Services directly interact with each other through references.
- D. Services intercept and modify messages as they are passed between providers and requesters.

Correct Answer: B

QUESTION 2

An integration developer wants to access a database table on a DB2 database installed on an AIX system using a JDBC Adapter. Using the configuration wizard of the JDBC Outbound Adapter import, the integration developer is prompted for JAR files. Which kind of JAR files are required?

- A. AIX specific JAR files
- B. JDBC standard JAR files
- C. DB2 specific JAR files
- D. DB2 and AIX specific JAR files

Correct Answer: C

QUESTION 3

An integration developer has set breakpoints in an XML map and is running it on a server. The server does not pause when the breakpoints are encountered. What must the integration developer do in order to stop on the breakpoints?

- A. Enable debugging on the server.
- B. Test the XML map within the workspace.
- C. Refactor the XML map on the server.
- D. Refactor the XML map within the workspace.

Correct Answer: B

QUESTION 4

An integration developer is tasked to test the XML maps created in the mediation flow component using the integration test client. In order to perform testing of the XML maps, which of the following is most applicable?

- A. XML maps can be tested but not in debug mode.
- B. XML maps can be tested without deploying on to the server.
- C. XML maps can be tested without association to a mapping file.
- D. A mediation module containing an XML map must be deployed to the server before the test is executed.

Correct Answer: B

QUESTION 5

A mediation module contains a mediation flow MF with two levels of hierarchical sub flows. SF1 (within MF) and SF11 (within SF1). The integration developer wants to be able to modify the properties of some of mediation primitives within SF11 at runtime.

What is the correct way to implement this requirement?

- A. Promote the properties for runtime administration till only one level of sub flow hierarchy.
- B. Promote the properties for runtime administration in a non-hierarchical mediation flow only.
- C. Set the desired properties as promotable at SF11 to make them appear as promotable properties of WF at runtime.
- D. Set the desired properties as promotable at SF11 and SF1 to make them appear as promotable properties of MF at runtime.

Correct Answer: C
