QUESTION 1

A new version of a common business object currently defined in a shared library is required for a new mediation module. Which of the following should be done to ensure that older modules are not immediately affected by the change and both versions of the business object are available to all modules?

- A. Create the new version of the business object using a different name in the shared library.
- B. Create the new version of the business object using the same name in the new mediation module without modifying the shared library or the other mediation modules.
- C. Create the new version of the business object using a different name in the new mediation module without modifying the shared library or the other mediation modules.
- D. Move the old version of the common business object to each existing dependent mediation module, then create the new version of the business object in the new mediation module.

Correct Answer: A

QUESTION 2

The integration developer has an existing mediation flow that was developed using WebSphere Integration Developer V6.2. The developer would like to take advantage of functionality in new mediation primitives of WebSphere Integration Developer V7.0 to enhance the mediation flow design. What should the integration developer do to migrate project artifacts from WebSphere Integration Developer V6.2 to WebSphere Integration Developer V7.0? From WebSphere Integration Developer V6.2, export the artifacts:

- A. into a JAR file. Import the JAR file into the WebSphere Integration Developer V7.0, which will automatically migrate the project.
- B. as an EAR file. Import the EAR file into WebSphere Integration Developer V7.0, which will automatically migrate the project.
- C. into a Project Interchange (PI) file. Import the PI file into WebSphere Integration Developer V7.0. Then use the migration wizard to complete the process.
- D. into an Eclipse Product. Import the Eclipse file into WebSphere Integration Developer V7.0. Then use the migration wizard to complete the process.

Correct Answer: C

QUESTION 3

An integration developer has been tasked to develop a mediation module that integrates a legacy J2EE application deployed on a remote server. The legacy application is exposed through an EJB facade and the integration developer decides to use an EJB import. What is the most suitable approach to configure it? The integration developer should:

- A. add the corresponding EJB client project to the module dependencies and select the EJB local interface for the import.
- B. import the corresponding EJB client project into the workspace and select the EJB remote interface for the import.

C. create a WSDL interface with the same operations as the EJB interface, select it as the import interface and add the EJB JNDI Name in the binding section.

D. use the external service wizard to point to the EJB through its IIOP URL and the wizard automatically creates the interface and the business objects for the import.

Correct Answer: B

QUESTION 4

An integration developer is designing an XML map that transforms an array of elements from the input to a corresponding array of a different type to the output. Which transform type would be the most appropriate for this situation?

- A. Move
- B. Merge
- C. Append
- D. For each

Correct Answer: D

QUESTION 5

An integration solutions developer needs to create a module with a many-to-many mapping between service requesters and service providers supporting Web services.

Using the patterns explorer, which pattern would be most appropriate?

- A. Proxy Service Gateway
- B. Static Service Gateway
- C. Dynamic Service Gateway
- D. Dynamic Simple Service Proxy

Correct Answer: A
