QUESTION 1

Which GIT command do you use to consolidate all changes from one branch with another branch using a single commit?

- A. Commit
- B. Push
- C. Rebase
- D. Merge

Correct Answer: D

QUESTION 2

You are asked to produce sales value for the month using sales order line items (sales price per item x quantity sold), what do you use to achieve this in a calculated column of a calculation view? There are 2 correct answers to this question.

- A. Keep flag
- B. Transparent filter
- C. Dynamic join
- D. Non-equijoin

Correct Answer: BC

QUESTION 3

You use path expressions (associations) in your Core Data Services to combine entities instead of using SQL joins.

What is a benefit to use these associations?

- A. It increases the performance of the query.
- B. It enforces referential constraint.
- C. It improves the writability and readability of the query.
- D. It invokes authorization checks on database level.

Correct Answer: C

QUESTION 4

You work on a multi-target application that uses the SAP HANA Deployment Infrastructure (HDI). Which operations can you perform in the SAP Web IDE for SAP HANA? There are 2 correct answers to this question.

- A. Create objects in the SAP HANA repository.
- B. Choose the supported SAP HANA versions.
- C. Configure the artifact namespaces.
- D. Deploy HTML5 modules to the SAP HANA database.

Correct Answer: AD

QUESTION 5

You create a simple data model to store user information. The model contains two tables: One for the user information, the other for user address details. The user can only have one address. You also need a view to show the complete information of the user including the address. Which actions do you perform if you use CDS artifacts only?

- A. Create two entities for the user and address. Extend the user entity with address columns. Create a view named User Details using select on the user entity.
- B. Create two entities for the user and address. Create a User Details calculation view and join the user and address information.
- C. Create two entities for the user and address. Create an association in the user entity to the address O entity. Define a User Details view using select on the address entity and using the association to read the user information.
- D. Create two entities for the user and address. Create an association in the user entity to the address O entity. Define a User Details view using select on the user entity and using the association to read the address information.

Correct Answer: D
