QUESTION 1

There are several interesting things to note about normal profit: Note: There are 3 correct answers to this question.

- A. The normal profit of category is independent of the target values themselves will not change
- B. A consequence of 1 is that this metric is resistant to outliers: when there are a few
- C. occurrences of the target with very high values with respect to the rest of the target value distributions, the notion of normal profit is not impacted.
- D. To test the latest version of the application without impacting the current production environment.
- E. The weighted sum of the normal profit for all categories of a given variables will always be 0.

Correct Answer: ABD

QUESTION 2

To Validate the Model Generated :

Note: There are 2 correct answers to this question.

- A. Verify the Predictive Power Automated Analytics User Guides and Scenarios Modeler If the performance of the model meets your requirements, go to Step 3 - Analyzing and Understanding the Model Generated. Otherwise, go to the procedure To Generate a New Model.
- B. You can also check other indicators provided in addition to KI and KR during the model generation. For example, you could view the total elapsed time required to generate the model and information on the standard error rate.
- C. A web server such as Apache Web Server or Windows Internet Information Services (IIS).

Correct Answer: AB

QUESTION 3

A variable corresponds to an attribute which describes the observations stored in your database. For example, in a database containing information about your customers, the "name" and "address" of those customers are examples of variables. In Automated Analytics, a variable is defined by three aspects:

Note: There are 2 correct answers to this question.

- A. The type of variable: Continuous Variables whose values are numerical, continuous, and sortable. They can be used to calculate measures are sortable. Nominal Variables
- B. with discrete values that are not sortable. Textual A type of nominal variable containing phrases, sentences or complete texts. Textual variables are used for text analyses.
- C. The storage format of the variable
- D. The role of the variable: Target, Explanatory, or Weight

E. With standalone installers on each targeted client system.

Correct Answer: AB

QUESTION 4

Depending on the type of the target, the model graph plot allows you to:

Note: There are 3 correct answers to this question.

- A. View the realizable profit that pertains to your business issue using the model generated when the target is nominal.
- B. Compare the performance of the model generated with that of a random type model and that of a hypothetical perfect model when the target is nominal.
- C. A web server such as Apache Web Server or Windows Internet Information Services (IIS).
- D. Compare the predicted value to the actual value when the target is continuous .

Correct Answer: ABD

QUESTION 5

The importance of a category depends on both its difference to the target category mean and the number of represented cases. High importance can result from any of the following:

Note: There are 3 correct answers to this question.

- A. A high discrepancy between the category and the mean of the target category of the target variable
- B. A minor discrepancy combined with a large number of records in the category
- C. A combination of both
- D. recise scheduling of main industrialization tasks

Correct Answer: ABC
