### QUESTION 1

How can you enforce an additional transaction start authorization check for a custom transaction?

- A. Maintain the SU24 entry for the custom transaction and adding the desired authorization object, setting the Check Indicator to "Check" and setting Proposal to Yes.
- B. Using transaction SE93, update the custom transaction definition by specifying the desired authorization object and maintaining the desired field values.
- C. Without additional custom development it is not possible to add another check during transaction start.
- D. For each role containing the custom transaction, add the desired authorization object manually in transaction PFCG, maintain the field values and then generate the profile.

Correct Answer: A

---

### QUESTION 2

During maintenance of a role you notice that the status text for an authorization object indicates status "Changed New". What does this status text mean?

- A. The authorization object has been flagged as a critical object.
- B. The authorization object must be maintained again.
- C. The authorization object was used to create a new authorization because the initial configuration of the role changed a default value maintained in SU24.
- D. The authorization object was used to create a new authorization because the values contained in SU24 differ from the SAP Standard contained in SU25.

Correct Answer: C

---

### QUESTION 3

Your company uses derived roles. During maintenance of the Plant Manager imparting role, you add a new transaction to the Menu tab which introduces a new organizational level that will be unique for each of your 150 plants. How will the new organization level be maintained in the derived roles?

- A. All at once using transaction PFCGMASVAL
- B. Automatically using the Copy Data button during maintenance of the imparting role
- C. Automatically after generating the profiles of the imparting role and adjusting the derived roles
- D. Manually by maintaining each derived role individually

Correct Answer: D

---

#### QUESTION 4

Which of the following checks are performed for SAProuter by the SAP Security Optimization Service? (Choose three.)

- A. SAProuttab Check
- B. Password Check
- C. Secure Network Communication Check
- D. User Management Check
- E. Operating System Access Check

Correct Answer: ACE

---

#### QUESTION 5

In the case of missing OData authorizations, why is it not recommended to maintain S\_SERVICE manually within an SAP Fiori authorization role? (Choose two.)

- A. Both front-end and back-end entries are generating the same S\_SERVICE authorization object with different authorization values.
- B. Both front-end and back-end entries are generating the same S\_SERVICE authorization object with the same authorization values.
- C. The SRV\_NAME value of the S\_SERVICE authorization object is the name of an OData service.
- D. The SRV\_NAME value of the S\_SERVICE authorization object is the hash value of an OData service.

Correct Answer: AD
