QUESTION 1

What does index fragmentation in the Oracle database mean? There are 2 correct answers to this question.

- A. The index root block is fractured.
- B. The fragmentation of an index specifies how well the space is used in index.
- C. The index leaf blocks are spread over several table spaces.
- D. The smaller the space that is actually used in comparison with the total available space, the more fragmented the index.

Correct Answer: CD

QUESTION 2

Runtime Errors Edit Goto System Help

Runtime Error - Description of Exception

Long Text Debugger

Category: ABAP Programming Error
Runtime Errors: TIME_OUT
ABAP Program: IREPOR12
Application Component: Not Assigned
Date and Time: 01.12.2011 09:55:38

Short text
Time limit exceeded.

What happened?
The program "IREPOR12" has exceeded the maximum permitted runtime without interruption and has therefore been terminated.

Error analysis
After a specific time, the program is terminated to make the work area available to other users who may be waiting. This is to prevent a work area being blocked unnecessarily long by, for example:
- Endless loops (DO, WHILE, ...).
- Database accesses with a large result set
- Database accesses without a suitable index (full table scan)
The maximum runtime of a program is limited by the system profile parameter "rdisp/max_wprun_time". The current setting is 300 seconds. If this time limit is exceeded, the system attempts to cancel any running SQL statement or signals the ABAP processor to stop the running program. Then the system waits another 60 seconds maximum. If the program is then still active, the work process is restarted.

Date: 01.12.2011

Time	Type	W	Cls	User	TCode	Priority	Grp	N	Text
09:55:38	DIA	000	100	CATCH	SE38	●	AB	0	Run-time error "TIME_OUT" occurred
09:55:38	DIA	000	100	CATCH	SE38	○	AB	1	> Short dump "111201 095538 twdf1903_DEV_00" generated

There are 2 correct answers to this question.

- A. The error can be avoided by running the respective program in a batch job in the SAP system, if background processing is possible for this program.
- B. The error was caused by a transaction in the SAP system that exceeded the extended memory
- C. The error can be avoided by reducing the memory usage of the respective transaction in the SAP system.
- D. The error was caused by a transaction that exceeded the maximum runtime in a dialog work process of the SAP system.
- E. The error was caused by a transaction that exceeded the maximum runtime in a background work process of the SAP system.

Correct Answer: AD

QUESTION 3

For which of the following options do you need to install and configure SAProuter? There are 2 correct answers to this question.

- A. EarlyWatch Service session done remotely by an SAP Support employee
- B. Connection to <https://scn.sap.com>
- C. Remote Consulting from SAP
- D. Connection to <https://service.sap.com>
- E. Create a support message in case of problems with the SAP system

Correct Answer: CE

QUESTION 4

The NOMOUNT state is necessary for database recovery, for changing the AKCHR\\ELOG mode, for renaming (moving) data files and for adding, dropping or renaming online redo log files.

- A. Incorrect
- B. Correct

Correct Answer: A

QUESTION 5

Which of the following statements are correct regarding the use of the lock table in an SAP system based on AS ABAP with several instances?

There are 2 correct answers to this question.

- A. The lock table is located in the shared memory of the message server, and can be accessed by all work processes through the message server.
- B. The lock table is located in the shared memory of the computer where the enqueue work process is running.
- C. The lock table is a transparent table located in the SAP system, and the contents can be displayed using the ABAP dictionary.
- D. If a dialog work process from another instance (without enqueue work process)
- E. requests a lock, the lock operation is performed by the enqueue work process on the central instance.

Correct Answer: BD
