### QUESTION 1

Which of the following actions must you perform to design the dimensions of an InfoCube when you want to accelerate query performance? (3)

- A. Assign two characteristics that have an N:M relationship to different dimensions
- B. Each dimension should have the same number of characteristics
- C. Place the most selective characteristics first in the dimensions
- D. Use the line item dimensions for characteristics with high cardinality
- E. Assign two compounded characteristics to different dimensions

Correct Answer: ACD

---

### QUESTION 2

Which of the following initial tasks should you perform when designing an SAP BW data model? (2)

- A. Analyze relationships between the characteristics and their attributes
- B. Evaluate the volume of data to be loaded
- C. Evaluation of the number and types of users
- D. Evaluate the format of data to be loaded

Correct Answer: BC

---

### QUESTION 3

An InfoCube has been designed with 2 user-defined Dimensions containing 1 and 3 Characteristics respectively. All InfoObjects have the same level of master data value cardinality. How can you change the design of the InfoCube to optimize performance? Select the correct answer.

- A. Put all Characteristics in a single user-defined Dimension.
- B. Distribute the InfoObjects unevenly between the Dimensions.
- C. Make the single InfoObject the one Dimension the key of the InfoCube.
- D. Create 2 more Dimensions so that each has only 1 InfoObject.

Correct Answer: D

---

### QUESTION 4

Which of the following does the data propagation layer of your SAP BW system offer? There are 2 correct answers.

- A. Complete data history.
- B. Fast load of mass data.
- C. A single version of the truth.
- D. Ability to extract once and deploy many times.
- E. A single version of the truth.

Correct Answer: D

---

#### QUESTION 5

There is a need to extract millions of records from an Oracle database into BW for analysis. Which of the following represents the best ETL strategy? Select the correct answer.

- A. Modify a BI Content DataSource to include the Teradata fields in the extraction.
- B. Use the File interface to extract manageable files of no more than 20,000 records each.
- C. Use a WebService DataSource to stream the records into the PSA of the DataSource.
- D. Use DB Connect for the ETL process.
- E. Use UD Connect for the ETL process.

Correct Answer: D
