QUESTION 1

When analyzing the SAP ECC order report for a planned order for a finished product, you discover that one of the assemblies will not be available in time for the scheduled final assembly because of automatic forward scheduling.

Which planning procedure do you use to create a feasible production plan from a requirements planning perspective?

- A. Total planning online
- B. Multi-level single-item planning with the "display material list" option
- C. Interactive single-item planning for the delayed assembly
- D. Multi-level single-item planning with the "simulation mode" option

Correct Answer: D

QUESTION 2

You want to create a new material that - is kept in stock- is externally procured- is used as a component in the bills of material for various final products- must not be sold directly.

Which standard SAP material type do you use?

- A. NLAG (non-stock material)
- B. FERT (finished product)
- C. ROH (raw material)
- D. HAWA (trading good)

Correct Answer: C

QUESTION 3

What do you have to consider regarding ATP checks in SAP ECC that are triggered from customer orders?

- A. If the ATP check determines non-availability, it then checks in the next step whether timely procurement or production is possible.
- B. The ATP quantity is the available quantity that can be used to confirm incoming customer orders.
- C. An ATP check creates fixed links between customer orders and their confirmed receipts.
- D. The ATP check does not take stocks and receipts into account. It checks consumption of planned independent requirements.

Correct Answer: B

QUESTION 4

When maintaining a work center, formulas can be assigned in the scheduling view. Formulas use formula parameters for calculation. What can be the origin of the formula parameters used for scheduling? (Choose three.)

- A. General values from work scheduling view in the material master
- B. Standard value from operation in task list
- C. User-defined field from operation in task list
- D. General operation values in task list
- E. General item values in bill of materials

Correct Answer: BCD

QUESTION 5

An enterprise wants to use SAP ECC requirements planning together with the NETPL procedure (net change planning in the planning horizon). The planning horizon should be set equally for all materials by default. However, some materials need to have a different planning horizon.

Which procedure do you recommend for setting the planning horizon?

- A. Set the planning horizon in the MRP groups in Customizing and store deviant entries in the material masters for the corresponding materials.
- B. Set the planning horizon in the plant parameters in Customizing and store deviant entries in the material masters for corresponding materials.
- C. Set the planning horizon in the MRP groups and assign deviant entries via the plant parameter settings in Customizing.
- D. Set the planning horizon in the plant parameters in Customizing and assign deviant entries via the MRP groups for the corresponding materials.

Correct Answer: D
