QUESTION 1

What 'related lists' are available on the formula indicator form? (Choose three.)

- A. Targets
- B. Contributing Indicators
- C. Breakdowns
- D. Signals

Correct Answer: ABC

Here are the available related lists on the baseline configuration when navigating to the Formula Indicators form: Breakdowns, Contributing Indicators, Time series exclusions, Targets, Thresholds, and Diagnostic Results.

'Signals' is not an out-of-the-box related list on the Formula Indicators form. Use the Contributing indicators related list to navigate to the indicators used in the formula or their indicator sources. If you include another formula indicator in the formula, both that indicator and its contributing indicators are listed.

QUESTION 2

Which of the following data update settings for single score visualisations shows the timestamp of when the score was last updated?

- A. Show score update time
- B. Real time update
- C. Background refresh interval (minutes)
- D. Follow filters

Correct Answer: A

'Show score update time' shows the timestamp of when the score was last updated. 'Follow filters' set for a workspace page. When enabled, the visualisation displays on a workspace with the filters set by the page. Toggle off to disable a

visualisation from accepting any filter input.

'Background refresh interval (minutes)' shows how often, in minutes, the landing page refreshes the visualisation if you have navigated away from it.

'Real time update' updates score in real-time.

QUESTION 3

How do you create and associate breakdowns on the breakdown source form?

- A. By selecting the 'New' button on the 'Breakdowns' related list
- B. From the 'Additional actions' menu
- C. From the 'Create Breakdowns' related link
- D. By adding multiple 'Facts tables' under the Source tab

Correct Answer: A

A breakdown source is defined as a set of records from a table or database view or as a bucket group. Multiple breakdowns can use the same breakdown source. Breakdown sources specify which unique values, called breakdown elements,

a breakdown contains.

Breakdown source records have a related list that lists the breakdowns that are based on that source. You can create a breakdown by selecting the 'New' button while in this list. The list works like the Indicators list on indicator source

records. Other options in this question do not exist on the breakdown source form. After you create breakdowns that use this source, these breakdowns are listed in the Breakdowns tab.

QUESTION 4

Which of the following can be used across all the visualisations in a workspace?

- A. Signal
- B. Dashboard Builder
- C. Studio
- D. User Experience filter

Correct Answer: D

Create a single User Experience filter for use across all the visualisations in a workspace. The filter you create is available in the workspace in which you created it. For filters to work in workspaces, you must configure an event handler to apply the filters.

Reference: <https://docs.servicenow.com/bundle/quebec-servicenow-platform/page/administer/workspace/task/create-user-exp-filters.html>

QUESTION 5

Which of the following are suggested when you type in a query on Analytics QandA? (Choose three.)

- A. Recent searches
- B. Tables and columns
- C. Breakdowns
- D. Indicators

Correct Answer: ABD

When you use Analytics QandA, the suggestions from previous searches are now shown together with the suggested indicators, tables, and columns. As you type in a query, Analytics QandA suggests recent searches, indicators, tables, and

columns that match what you have typed so far. Only the tables and columns to which you have access are shown.

If Analytics QandA cannot determine which table you want, it shows you up to three likely tables.
