-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Level DB is the default database for Hyperledger Fabric and is particularly appropriate when ledger states comprise what type of data?

- A. Complex key-value pairs
- B. Rich Queries
- C. JSON data pairs
- D. Simple key-value pairs

Correct Answer: D

Simple key-value pairs - LevelDB is the default and is particularly appropriate when ledger states are simple key-value pairs. A LevelDB database is closely co-located with a network node ?it is embedded within the same operating system process. CouchDB is a particularly appropriate choice when ledger states are structured as JSON documents because CouchDB supports the rich queries and update of richer data types often found in business transactions. Implementation- wise, CouchDB runs in a separate operating system process, but there is still a 1:1 relation between a network node and a CouchDB instance. All of this is invisible to chaincode. QUESTION 2

The Hyperledger Project has a modular umbrella schema to its organization which includes three parts of the organizational schem As part of the organizational schema, it includes an "Infrastructure" Module that is structured with four layers.

What layer below is NOT part of the structure?

- A. Architecture
- B. Organizational
- C. Legal
- D. Technical

Correct Answer: A

The Infrastructure Module includes the following four modules: Technical, Legal, Marketing, and Organizational.

QUESTION 3

Transaction Log Data is immutable i.e , once its written to the log it cannot be changed or deleted.

- A. TRUE

B. FALSE

Correct Answer: A

QUESTION 4

There is _____ when a transaction is validated and committed to the ledger:

- A. Immutability
- B. Transparency
- C. Confidentiality
- D. Privacy

Correct Answer: B

QUESTION 5

Every .cto model file requires a _____ which means that every name inside of it must be unique.

- A. namespace
- B. chaincode
- C. participant
- D. asset

Correct Answer: D
