⚙ **365 Days** Free Update

⚙ **800,000+** Satisfied Customers

QUESTION 1

You are planning a Hadoop cluster and considering implementing 10 Gigabit Ethernet as the network fabric. Which workloads benefit the most from a faster network fabric?

A. When your workload generates a large amount of output data, significantly larger than amount of intermediate data

B. When your workload generates a large amount of intermediate data, on the order of the input data itself

C. When workload consumers a large amount of input data, relative to the entire capacity of HDFS

D. When your workload consists of processor-intensive tasks

Correct Answer: B

QUESTION 2

Your Hadoop cluster contains nodes in three racks. You have NOT configured the dfs.hosts property in the NameNode\\'s configuration file. What results?

A. No new nodes can be added to the cluster until you specify them in the dfs.hosts file

B. Presented with a blank dfs.hosts property, the NameNode will permit DatNode specified in mapred.hosts to join the cluster

C. Any machine running the DataNode daemon can immediately join the cluster

D. The NameNode will update the dfs.hosts property to include machine running DataNode daemon on the next NameNode reboot or with the command dfsadmin -refreshNodes

Correct Answer: C

QUESTION 3

You are configuring a cluster running HDFS, MapReduce version 2 (MRv2) on YARN running Linux. How must you format the underlying filesystem of each DataNode?

A. They must not formatted - - HDFS will format the filesystem automatically

B. They may be formatted in any Linux filesystem

C. They must be formatted as HDFS

D. They must be formatted as either ext3 or ext4

Correct Answer: D

QUESTION 4

Which YARN process runs as "controller O" of a submitted job and is responsible for resource requests?

A. ResourceManager

B. NodeManager

C. JobHistoryServer

D. ApplicationMaster

E. JobTracker

F. ApplicationManager

Correct Answer: D

QUESTION 5

A slave node in your cluster has four 2TB hard drives installed (4 x 2TB). The DataNode is configured to store HDFS blocks on the disks. You set the value of the dfs.datanode.du.reserved parameter to 100GB. How does this alter HDFS block storage?

A. A maximum of 100 GB on each hard drive may be used to store HDFS blocks

B. All hard drives may be used to store HDFS blocks as long as atleast 100 GB in total is available on the node

C. 100 GB on each hard drive may not be used to store HDFS blocks

D. 25 GB on each hard drive may not be used to store HDFS blocks

Correct Answer: B
