QUESTION 1

Which networking concept in a cloud environment allows for network segregation and isolation of IP spaces?

- A. PLAN
- B. WAN
- C. LAN
- D. VLAN

Correct Answer: D

A virtual area network (VLAN) allows the logical separation and isolation of networks and IP spaces to provide enhanced security and controls.

QUESTION 2

Which of the following represents a prioritization of applications or cloud customers for the allocation of additional requested resources when there is a limitation on available resources?

- A. Provision
- B. Limit
- C. Reservation
- D. Share

Correct Answer: D

The concept of shares within a cloud environment is used to mitigate and control the request for resource allocations from customers that the environment may not have the current capability to allow. Shares work by prioritizing hosts within a cloud environment through a weighting system that is defined by the cloud provider. When periods of high utilization and allocation are reached, the system automatically uses scoring of each host based on its share value to determine which hosts get access to the limited resources still available. The higher the value a particular host has, the more resources it will be allowed to utilize.

QUESTION 3

Which of the following is NOT an application or utility to apply and enforce baselines on a system?

- A. Chef
- B. GitHub
- C. Puppet
- D. Active Directory

Correct Answer: B

GitHub is an application for code collaboration, including versioning and branching of code trees. It is not used for applying or maintaining system configurations.

QUESTION 4

Which of the following is not a way to manage risk?

- A. Transferring
- B. Accepting
- C. Mitigating
- D. Enveloping

Correct Answer: D

Enveloping is a nonsense term, unrelated to risk management. The rest are not.

QUESTION 5

Which of the following roles is responsible for obtaining new customers and securing contracts and agreements?

- A. Inter-cloud provider
- B. Cloud service broker
- C. Cloud auditor
- D. Cloud service developer

Correct Answer: B

The cloud service broker is responsible for obtaining new customers, analyzing the marketplace, and securing contracts and agreements.
