QUESTION 1

The movement of liquid in a partially filled tanker truck is known as what?

- A. Surge
- B. Rolling
- C. Outage
- D. Baffle

Correct Answer: A

The correct answer is: Surge. Liquid surge is caused by the movement of liquid in partially filled tanks. Abrupt start, stops or lane changes will increase the effects of liquid surge.

QUESTION 2

Name some suspension system defects.

- A. Broken leaves in leaf spring.
- B. Cracked or broken spring hangers.
- C. Leaking shock absorbers.
- D. All of the above.

Correct Answer: D

QUESTION 3

You have just started your first job with an over the road trucking company. A couple of months go by and you realize that you are driving in the same weather, on the same roads, and hauling the same stuff for half of what other drivers are making! What should you do?

- A. Abandon the truck and take the bus home
- B. Just drive for half the money
- C. Accept the fact you will be living in a truck the rest of your life and broke
- D. Get the Ebook at Richtruckdriver.com and start planning to get a real truck driver job

Correct Answer: D

QUESTION 4

With the controlled braking method, you _____

- A. Lightly apply braking pressure
- B. Apply the brakes as hard as you can without locking the wheels
- C. Apply the brakes all the way until the wheels lock up, release the brakes and apply them again when the wheels start to roll again
- D. Repeatedly tap the brakes as fast as you can

Correct Answer: B

The correct answer is: Apply the brakes as hard as you can without locking the wheels. In addition, you should keep your steering movements very small while using a "controlled braking" method.

QUESTION 5

What psi level is the safety relief valve set to open at?

- A. 150 psi
- B. 125 psi
- C. 60 psi
- D. 100 psi

Correct Answer: A

The correct answer is: 150 psi. A safety relief valve is installed in the first tank that the air compressor pumps air into. A safety valve protects the tank and system from too much pressure by opening up at 150 psi.
