QUESTION 1

Which of the following resources does NMAP need to be used as a basic vulnerability scanner covering several vectors like SMB, HTTP and FTP?

A. Metasploit scripting engine

B. Nessus scripting engine

C. NMAP scripting engine

D. SAINT scripting engine

Correct Answer: C

QUESTION 2

Hampton is the senior security analyst for the city of Columbus in Ohio. His primary responsibility is to ensure that all physical and logical aspects of the city\\'s computer network are secure from all angles. Bill is an IT technician that works with Hampton in the same IT department. Bill\\'s primary responsibility is to keep PC\\'s and servers up to date and to keep track of all the agency laptops that the company owns and lends out to its employees. After Bill setup a wireless network for the agency, Hampton made sure that everything was secure. He instituted encryption, rotating keys, turned off SSID broadcasting, and enabled MAC filtering. According to agency policy, only company laptops are allowed to use the wireless network, so Hampton entered all the MAC addresses for those laptops into the wireless security utility so that only those laptops should be able to access the wireless network. Hampton does not keep track of all the laptops, but he is pretty certain that the agency only purchases Dell laptops. Hampton is curious about this because he notices Bill working on a Toshiba laptop one day and saw that he was on the Internet. Instead of jumping to conclusions, Hampton decides to talk to Bill\\'s boss and see if they had purchased a Toshiba laptop instead of the usual Dell. Bill\\'s boss said no, so now Hampton is very curious to see how Bill is accessing the Internet. Hampton does site surveys every couple of days, and has yet to see any outside wireless network signals inside the company\\'s building.

How was Bill able to get Internet access without using an agency laptop?

A. Bill spoofed the MAC address of Dell laptop

B. Bill connected to a Rogue access point

C. Toshiba and Dell laptops share the same hardware address

D. Bill brute forced the Mac address ACLs

Correct Answer: A

QUESTION 3

Which tool/utility can help you extract the application layer data from each TCP connection from a log file into separate files?

A. Snort

B. argus

C. TCPflow

D. Tcpdump

Correct Answer: C

QUESTION 4

Lauren is performing a network audit for her entire company. The entire network is comprised of around 500 computers. Lauren starts an ICMP ping sweep by sending one IP packet to the broadcast address of the network, but only receives responses from around five hosts. Why did this ping sweep only produce a few responses?

A. Only Windows systems will reply to this scan.

B. A switched network will not respond to packets sent to the broadcast address.

C. Only Linux and Unix-like (Non-Windows) systems will reply to this scan.

D. Only servers will reply to this scan.

Correct Answer: C

QUESTION 5

How can telnet be used to fingerprint a web server?

A. telnet webserverAddress 80 HEAD / HTTP/1.0

B. telnet webserverAddress 80 PUT / HTTP/1.0

C. telnet webserverAddress 80 HEAD / HTTP/2.0

D. telnet webserverAddress 80 PUT / HTTP/2.0

Correct Answer: A
