### QUESTION 1

What adverse effect would you observe in a patient who is taking an excessive amount of bupropion (Wellbutrin)?

- A. Dizziness when getting up
- B. Seizure activity
- C. Increased weight
- D. Constipation

Correct Answer: B

The patient would begin to have seizures if they are taking an excess amount of bupropion (Wellbutrin). A dosage of more than 450 mg daily is considered to be excessive. Weight gain and constipation are common side effects of this medication. Orthostatic hypotension is not a side effect of this medication.

---

### QUESTION 2

You are conducting a teaching session for mothers at a local school on rubeola (measles). Which of the following would you not want to include in this education?

- A. Profuse runny nose, coughing and fever occur before the rash develops.
- B. The child may develop small, blue-white spots with a red base in the mouth
- C. Ears usually develop a rash first, which then spreads toward the feet.
- D. The communicable period usually ranges from 10 to 15 days after the rash appears.

Correct Answer: D

The communicable period for Rubeola (measles) is 4 to 5 days after the rash appears. The incubation period is 10-15 days. The blue-white spots found in the mouth during Rubeola are called Koplik's spots.

---

### QUESTION 3

You are providing a teaching session to a group of patients regarding skin cancer. Which of the following statements would you not want to include in this education?

- A. Wear sunscreen when engaged in outdoor activities.
- B. The body should be examined monthly for any lesions that appear suspicious.
- C. A hat, opaque clothing, and sunglasses should be worn when in the sun.
- D. Avoid sun exposure after 3pm.

Correct Answer: D

It would be incorrect to instruct the patients to avoid the sun after 3pm. The patients would want to avoid the sun between 11am and 3pm. All other statements are correct and should be taught to the patients.

---

#### QUESTION 4

Which of the following would you want to include in an education session to the staff on HIV and AIDS?

- A. Newborn infants of HIV positive mothers usually test positive.
- B. The hematological system is usually attacked by HIV.
- C. With AIDS, T4 cells cannot form protective antibodies due to depleted B cells.
- D. T lymphocytes are destroyed because the virus attacks the immune system.

Correct Answer: D

T lymphocytes are destroyed because the virus attacks the immune system. Infants born to mothers positive for HIV usually test positive for HIV antibodies not HIV virus. HIV attacks the immune system, not the hematological system. T4 cells are depleted in numbers and can not signal B cells.

---

#### QUESTION 5

You are assessing a patient with acute exacerbation of COPD. What would you expect to find on this assessment?

- A. Increased oxygen saturation
- B. Hypocapnia
- C. A hyperinflated chest on x-ray film
- D. A widened diaphragm on chest x-ray film

Correct Answer: C

The patient with COPD in exacerbation would have a hyperinflated chest on x-ray film. Other signs and symptoms would include hypoxemia, hypercapnia, dyspnea and use of accessory muscles. The diaphragm would be flattened with this patient.
