QUESTION 1

What risk is mitigated when routing meeting video traffic through a company's application servers rather than sending the video traffic directly from one user to another?

- A. The user's identity is protected from the other user
- B. The user is protected against cyberstalking attacks
- C. The user's IP address is hidden from the other user
- D. The user is assured that stronger authentication methods have been used

Correct Answer: C

routing meeting video traffic through a company's application servers rather than sending the video traffic directly from one user to another mitigates the risk that the user's IP address is hidden from the other user.

QUESTION 2

A privacy technologist has been asked to aid in a forensic investigation on the darknet following the compromise of a company's personal data. This will primarily involve an understanding of which of the following privacy-preserving techniques?

- A. Encryption
- B. Do Not Track
- C. Masking
- D. Tokenization

Correct Answer: A

a privacy technologist aiding in a forensic investigation on the darknet following the compromise of a company's personal data would primarily need an understanding of encryption. Encryption is a privacy-preserving technique that can help protect sensitive data from unauthorized access.

QUESTION 3

SCENARIO

Clean-Q is a company that offers house-hold and office cleaning services. The company receives requests from consumers via their website and telephone, to book cleaning services. Based on the type and size of service, Clean-Q then contracts individuals that are registered on its resource database - currently managed in-house by Clean-Q IT Support. Because of Clean-Q's business model, resources are contracted as needed instead of permanently employed. The table below indicates some of the personal information Clean-Q requires as part of its business operations:

Category	Types of Personal Information
Customers	Name, address (location), contact information, billing information
Resources (contracted)	Name, contact information, banking details, address

Clean-Q has an internal employee base of about 30 people. A recent privacy compliance exercise has been conducted to align employee data management and human resource functions with applicable data protection regulation. Therefore,

the Clean-Q permanent employee base is not included as part of this scenario.

With an increase in construction work and housing developments, Clean-Q has had an influx of requests for cleaning services. The demand has overwhelmed Clean-Q's traditional supply and demand system that has caused some overlapping bookings.

In a business strategy session held by senior management recently, Clean-Q invited vendors to present potential solutions to their current operational issues. These vendors included Application developers and Cloud-Q's solution providers,

presenting their proposed solutions and platforms.

The Managing Director opted to initiate the process to integrate Clean-Q's operations with a cloud solution (LeadOps) that will provide the following solution one single online platform: A web interface that Clean-Q accesses for the purposes

of resource and customer management. This would entail uploading resource and customer information.

A customer facing web interface that enables customers to register, manage and submit cleaning service requests online.

A resource facing web interface that enables resources to apply and manage their assigned jobs.

An online payment facility for customers to pay for services.

What is a key consideration for assessing external service providers like LeadOps, which will conduct personal information processing operations on Clean-Q's behalf?

- A. Understanding LeadOps' costing model.
- B. Establishing a relationship with the Managing Director of LeadOps.
- C. Recognizing the value of LeadOps' website holding a verified security certificate.
- D. Obtaining knowledge of LeadOps' information handling practices and information security environment.

Correct Answer: D

When engaging an external service provider to process personal information on its behalf, it is important for Clean-Q to have a good understanding of the service provider's information handling practices and information security environment. This will help Clean-Q assess whether or not the service provider has appropriate measures in place to protect the personal information it entrusts to them.

QUESTION 4

What is an Access Control List?

- A. A list of steps necessary for an individual to access a resource.
- B. A list that indicates the type of permission granted to each individual.
- C. A list showing the resources that an individual has permission to access.
- D. A list of individuals who have had their access privileges to a resource revoked.

Correct Answer: C

QUESTION 5

Which of these actions is NOT generally part of the responsibility of an IT or software engineer?

- A. Providing feedback on privacy policies.
- B. Implementing multi-factor authentication.
- C. Certifying compliance with security and privacy law.
- D. Building privacy controls into the organization's IT systems or software.

Correct Answer: A
