#### QUESTION 1

A security analyst has been asked to provide a triple A service (AAA) for both wireless and remote access network services in an organization and must avoid using proprietary solutions.

What technology SHOULD they adapt?

- A. TACACS+
- B. RADIUS.
- C. Oauth.
- D. MS Access Database.

Correct Answer: C

---

#### QUESTION 2

When calculating the risk associated with a vulnerability being exploited, how is this risk calculated?

- A. Risk = Likelihood \* Impact.
- B. Risk = Likelihood / Impact.
- C. Risk = Vulnerability / Threat.
- D. Risk = Threat \* Likelihood.

Correct Answer: C

---

#### QUESTION 3

How does the use of a "single sign-on" access control policy improve the security for an organisation implementing the policy?

- A. Password is better encrypted for system authentication.
- B. Access control logs are centrally located.
- C. Helps prevent the likelihood of users writing down passwords.
- D. Decreases the complexity of passwords users have to remember.

Correct Answer: B

---

#### QUESTION 4

Which of the following is an asymmetric encryption algorithm?

- A. DES.
- B. AES.
- C. ATM.
- D. RSA.

Correct Answer: D
