QUESTION 1

In a Pipeline, the stage step_____.

- A. can be used to group a number of other steps into a logical unit for display
- B. collects a set of artifacts that can be referenced in a later Pipeline step
- C. prepares a test environment in Jenkins
- D. transfers artifacts to a staging server for testing

Correct Answer: A

QUESTION 2

What are the main advantages of using webhooks/post commit hooks from your Source Code Management system to trigger your Jenkins project rather than using SCM polling? Choose 2

- A. Builds are started on a defined a on schedule.
- B. Avoid unnecessary overhead from polling.
- C. Builds are started immediately after changes are committed.
- D. The entire repository is scanned so no commits are missed.

Correct Answer: BC

QUESTION 3

Why is the performance of a Jenkins master improved by using a distributed builds architecture?

- A. Because executors cannot be allocated on the master.
- B. Because executors offloaded onto build nodes are not performant.
- C. Because it prevents the CPU being overloaded during parallel polls.
- D. Because it prevents builds from overloading a master's CPU/memory.
- E. Because builds cannot be run in parallel on a master.

Correct Answer: D

QUESTION 4

On a single Jenkins master you have a folder named "Project1 ". In this folder contains three jobs: "job master", "job develop", and "Job edge". The job "job master" is the latest built project and is in a success state while the two other

jobs are in falling state. Which statement is true about the folder "Project1"?

- A. It reports its health as "failed" {"Raining Cloud" weather icon), because that is the "worst health of the sub-items".
- B. It reports its health as "success" ("Sunny" weather icon), because that is the health of the "latest built item."
- C. It must be configured with a dedicated "Health Metric" setting before it can report its health with weather icons.
- D. It does not report its health on the folder level; only Jobs report health.

Correct Answer: A

QUESTION 5

You are an administrator of a base Jenkins master with the recommended plugin set and you want to connect a new agent using SSH. Authentication on the remote node that will host the agent is done with an SSH key pair which your users must NOT be able to see or access. Which of the following is TRUE assuming your users do not have admin rights?

- A. Use a credential "SSH Username with private key", restricted to the Scope "System", for the node's SSH authentication.
- B. You cannot use an SSH key-pair. Configure a password for the agent's SSH user, and create a credential of type "Username with password" for the node's SSH authentication.
- C. Use a credential "SSH Username with private key", restricted to the Scope "Agents", for the node's SSH authentication.
- D. The SSH key will be stored in the JENKINS_HOME/.ssh folder. Configure the agent to use a key from the "standard" SSH folder.

Correct Answer: A
