QUESTION 1

Your application is onboarding a number of users. The details of the users vary widely. What kind of database would be most suitable for this use case?

- A. NoSQL database like Firestore
- B. OLAP database like BigQuery which support SQL
- C. SQL database like MySQL or PostgreSQL
- D. OLTP database like Cloud Spanner

Correct Answer: A

1.NoSQL databases are best suited for this use case. Firestore is an appropriate one to use here

2.Cloud Firestore is a NoSQL document database that lets you easily store, sync, and query data for your mobile and web apps - at global scale.

QUESTION 2

The operating systems of some of your organization's virtual machines may have a security vulnerability.

How can your organization most effectively identify all virtual machines that do not have the latest security update?

- A. View the Security Command Center to identify virtual machines running vulnerable disk images
- B. View the Compliance Reports Manager to identify and download a recent PCI audit
- C. View the Security Command Center to identify virtual machines started more than 2 weeks ago
- D. View the Compliance Reports Manager to identify and download a recent SOC 1 audit

Correct Answer: A

Explanation: Security Health Analytics and Web Security Scanner detectors generate vulnerabilities findings that are available in Security Command Center. Your ability to view and edit findings is determined by the Identity and Access Management (IAM) roles and permissions you are assigned. For more information about IAM roles in Security Command Center.

QUESTION 3

Which Google Cloud product is designed to reduce the risks of handling personally identifiable information (PII)?

- A. Cloud Storage
- B. Google Cloud Armor

- C. Cloud Data Loss Prevention
- D. Secret Manager

Correct Answer: C

Reference: <https://cloud.google.com/blog/products/gcp/take-charge-of-your-sensitive-data-with-the-cloud-dlp-api>

Cloud Data Loss Prevention: Fully managed service designed to help you discover, classify, and protect your most sensitive data.

QUESTION 4

Your organization wants an economical solution to store data such as files, graphical images, and videos and to access and share them securely. Which Google Cloud product or service should your organization use?

- A. Cloud Storage
- B. Cloud SQL
- C. Cloud Spanner
- D. BigQuery

Correct Answer: A

Explanation: - Google Storage is GCP's version of AWS Simple Storage Service (S3) and an S3 bucket would be equivalent to a Google Storage bucket across the two clouds

Despite many external solutions for digital files, some people still store their photos, videos, and content files on their desktop or laptop. The only problem with this method is that your computer can quickly become cluttered with thousands of files. It slows your prized piece of hardware (computer) down.

When you want to find a digital file you probably *expect* that file to come flying up on your screen in an instant. Yet -- anyone who keeps a lot of photos on a computer knows it can take minutes, sometimes hours, to find one - even if you keep it on your desktop. It's just not all that convenient to store things this way. Most importantly, just storing these digital files on a desktop leaves them vulnerable to viruses, damage, or theft. Folks who rely on this also generally don't have a back-up plan.

QUESTION 5

What characteristics should an organization adopt to be a DevOps organization?

- A. Teamwork over individual work
- B. Obsession with Automation over preoccupation with manual work
- C. Product based teams over component teams.
- D. All of the Above

Correct Answer: D
