### QUESTION 1

Suppose company manufactures paint from a base color and adds tints to arrive at the final color. Suppose there are 10 tints and a final color is made by mixing any three of them with the base. There are 70 possible colors ( $10 \times 9 \times 8 = 720$ ). Forecasting and planning production for 720 items is a difficult task. It is much easier if:

- A. Production is planned at the level of the base color and the 10 tints. There are then only 10 items with which to deal: the base color and each of the 10 tints.
- B. Once a customer's order is received, the base color and the required tints can be combined (assembled) according to the order
- C. MPS is done at the component level
- D. None of these

Correct Answer: AB

---

### QUESTION 2

The needs of the customer are gathered using various survey methods or by comparing a company's own products against the competitions, these wants are referred to as:

- A. Customer will
- B. Voice of customer
- C. Customer liquidity
- D. Customer satisfaction

Correct Answer: B

---

### QUESTION 3

Currently, there is a trend towards more specialization in manufacturing whereby a factory specializes in a narrow product mix for a niche market. Generally, focused factories are thought to be more effectively and economically than more complex factories, the reason being that:

- A. repetition and concentration in one area allow the workforce and management to gain the advantages of specialization.
- B. The focused factory may be a "factory within a factory," an area in an existing factory set aside to specialize in a narrow product mix
- C. specialization has the disadvantage of inflexibility
- D. All of these

Correct Answer: A

---

#### QUESTION 4

With reference to the above example; how much should be produced each period?

- A. 120 cases
- B. 116 cases
- C. 122 cases
- D. None of these

Correct Answer: B

---

#### QUESTION 5
