QUESTION 1

A non-critical vulnerability has been identified by a Linux vendor, who has released a patch and recommends that it be applied immediately. Which of the following is the BEST plan for the cloud administrator to install the patch?

A. Schedule an emergency maintenance window and deploy the patch to servers in production.

B. Deploy the patch to the failover cluster and force a failover to the patched environment.

C. Deploy the patch to half of the servers in production and monitor for any issues.

D. Deploy the patch to the development and QA environments and request a functional test review.

Correct Answer: D

QUESTION 2

Some users are experiencing high latency when accessing their virtual desktops or retrieving saved documents. The administrator notices that two virtual desktops in the department are reserved for database processing applications that run several times a day. These machines are assigned to different hosts in the resource pool to provide a level of redundancy. Which of the following is the BEST course of action to remedy the situation?

A. Enable memory ballooning on the hypervisors supporting the database desktops

B. Enable I/O throttling on the hypervisors supporting the database desktops

C. Allocate more memory to the affected users\\' virtual desktops and the database desktops

D. Allocate more CPU resources to the affected users\\' virtual desktops

Correct Answer: C

QUESTION 3

An administrator is building a VM for a department whose requirements mandate that a particular vendor\\'s application run on one physical processor. In order to ensure that this requirement is met while ensuring optimal performance, which of the following should the administrator configure?

A. Memory affinity

B. Licensing

C. CPU hyperthreading

D. CPU affinity

Correct Answer: D

QUESTION 4

An administrator has been asked by the Chief Information Officer (CIO) to provide storage that will have the ability to accommodate at least FC and SATA in the same enterprise array with software that will be policy driven based on performance. Which of the following enterprise storage features should be recommended?

A. Storage provisioning

B. Storage tiering

C. Dynamic provisioning

D. Dynamic resource allocation

Correct Answer: B

QUESTION 5

An amount of storage capacity presented to a host to format with its own file system is:

A. a LUN

B. a zone

C. a share

D. an export

Correct Answer: C
