QUESTION 1

When is sampling for Profiling a good idea? Select the best answer.

- A. When the data set contains sensitive information like credit card numbers.
- B. When the probability of data quality issues is small.
- C. When the client provides assurances the quality of the data is good.
- D. When the volume of data is large and there are storage and/or time constraints.

Correct Answer: D

QUESTION 2

When profiling, why is it good to sort the value lists in both ascending and descending order?

- A. There is no specific reason. It is simply a step of an ordered best practice approach.
- B. It is good because it is easier to determine if a field is numeric or text.
- C. Values with leading spaces or punctuation will typically sort to the top or bottom making them easier to identify.
- D. None of the above.

Correct Answer: B

QUESTION 3

Which of the following cannot be executed in BOTH the Analyst and the Developer Tool?

- A. A rule created in the Analyst Tool
- B. A mapplet created in the Developer Tool and validated as a rule
- C. A mapplet created in the Developer Tool and validated as a mapplet
- D. A reusable rule created in the Analyst Tool

Correct Answer: B

QUESTION 4

When using field matching which is the best approach if using First Name as a match field?

- A. Never use First Name as it is not necessary
- B. No standardization of First Name field is necessary

C. Use the Edit Distance strategy

D. Create Soundex or NYSIIS value for the First Name and use it in match

Correct Answer: D

QUESTION 5

With respect to field matching in IDQ, which best describes the approach to address matching?

A. No standardization is necessary, map input fields to the match transformation

B. Standardize address fields and use address line, locality, region and postcode fields as input to the match transformation

C. Standardize address fields and use the discrete address component fields, locality, region and postcode fields as input to the match transformation

D. Standardize address fields, create a group key field which contains parts of the address fields and only use the group key for address matching

Correct Answer: B
