#### QUESTION 5

A technician is completing initial firmware updates on a server. One of the updates is a power supply update. During the update process, the server powers off. When the technician hits the power button, they do not see any response from the server.

What is the cause of this issue?

- A. Server lost power
- B. Control panel or power button failed
- C. Front power button is not operational during an update; the technician should use the rear power button.

D. PSU firmware may now be corrupted

Correct Answer: D
