QUESTION 1

An architect is designing a cloud. The architect has decided to place the cloud management platform components on a separate set of compute, network, and storage infrastructure from the consumer resources. Why would the architect make this decision?

- A. Provide static and dedicated resources to the management applications without affecting the efficiency of consumer resource sharing
- B. Provide static and dedicated resources to the consumer applications without affecting the efficiency of the management applications
- C. Provide additional security to the management infrastructure by eliminating exposure to public-facing networks
- D. Provide separate billing for the management applications for the consumer's resources

Correct Answer: C

QUESTION 2

You are creating a cloud infrastructure design for an organization. You learn that, for compliance reasons, the organization needs to maintain a separate set of infrastructures for certain deployed services. Which part of the design will be impacted by this requirement?

- A. Number of service catalogs
- B. Number of compute pools
- C. Service catalog sizing
- D. Over-commitment ratio

Correct Answer: B

QUESTION 3

A cloud architect is designing a hybrid cloud for an organization. A requirement for this environment is that the private cloud user credential be trusted by both cloud provisioning APIs. Which type of authentication will meet this requirement?

- A. Federated authentication
- B. Asymmetric encryption
- C. Symmetric encryption
- D. Shared-key authentication

Correct Answer: A

**QUESTION 4**

A cloud architect has determined that the cloud management infrastructure requires an authentication and PKI environment. In addition, each tenant will require its own authentication and PKI environment. What describes these separate environments in a cloud design document?

- A. Availability zones
- B. Fault domains
- C. Multi-tenancy
- D. Trust zones

Correct Answer: C

QUESTION 5

A cloud architect is expected to present a final cloud infrastructure design to an organization. The architect will meet with an organization's executives and discuss the physical design. Why might this to be the wrong time to present this design?

- A. Physical designs are too high level for executives
- B. Physical designs are too general for executives
- C. Physical designs are too detailed for executives
- D. Physical designs are too theoretical for executives

Correct Answer: C
