QUESTION 1

An organization is developing a cloud-native social-media website. The website will be written using elastic principles. When the website scales, it can add additional web, application and database instances to meet dynamic workload demand.

Which additional resources will be consumed by replication as the database layer expands.

- A. Public IP addresses, CPU, and memory
- B. CPU, memory, and network traffic
- C. Network traffic, public IP addresses, and CPU
- D. Memory, network traffic, and public IP addresses

Correct Answer: B

QUESTION 2

An organization wants to have showback capability in their private cloud. Which cloud management platform component should be included in the cloud design to support this requirement?

- A. SSO
- B. Service catalog
- C. Metering application
- D. Monitoring application

Correct Answer: C

QUESTION 3

An architect is designing a cloud. The architect has decided to place the cloud management platform components on a separate set of compute, network, and storage infrastructure from the consumer resources. Why would the architect make this decision?

- A. Provide static and dedicated resources to the management applications without affecting the efficiency of consumer resource sharing
- B. Provide static and dedicated resources to the consumer applications without affecting the efficiency of the management applications
- C. Provide additional security to the management infrastructure by eliminating exposure to public-facing networks
- D. Provide separate billing for the management applications for the consumer's resources

Correct Answer: C

QUESTION 4

During an assessment for an organization's cloud design, a cloud architect discovers that developers will be creating applications for tenants. The applications will self-scale based on an internal trigger. The architect has included cloud management platform (CMP) components in the design that will support this requirement. To meet this requirement, what else should the cloud architect consider?

- A. Mechanisms exist for assigning IP addresses and updating DNS
- B. Mechanisms exist for changing host CPU over-commitment ratios
- C. A CMP account with elevated privileges exists that can be shared with developers
- D. Component APIs are located on an isolated network

Correct Answer: B

QUESTION 5

A cloud architect is designing a private cloud for an organization. The organization has no existing backup infrastructure. They want to offer consumers the ability to backup virtual machine instances using image-based backups.

What should the cloud architect look for when selecting a backup application for this environment?

- A. Virtual machine hardware is on the backup application vendor's compatibility list
- B. Hypervisor servers' hardware is on the backup application vendor's compatibility list
- C. Backup application can be integrated with the selected CMP components
- D. Backup application supports a cloud gateway for accessing the cloud-based virtual machines

Correct Answer: D
