QUESTION 1

A VDI deployment is planned for an environment that consists of VMAX3 and XtremIO. The data will have a high degree of deduplication and will require QoS and VVOL support. How can the existing infrastructure be leverage while minimizing increased storage capacity?

- A. Use XtremIO for the new deployment
- B. Use FAST.X with XtremIO for the new deployment
- C. Add full capacity required for VMAX3
- D. Add half the capacity required for the VMAX and use compression

Correct Answer: A

QUESTION 2

What is the best practice for FA utilization in a VMAX3 array?

- A. 50% busy with two engines
- B. 50% busy with more than two engines
- C. 50% busy with one engine
- D. 50% busy with two or more engines

Correct Answer: A

QUESTION 3

Refer to the Exhibit.

Migration of data from a VMAX to a VMAX All Flash array is planned. The target array has been installed and RDF connectivity between the two arrays has been established. In addition, the application host is accessing data on the source array.

What is the result when the Non-Disruptive Migration Setup operation is performed?

- A. Creates RDF pairs and places them in pass-through mode
- B. Replicates the storage configuration from the source to the target array
- C. Creates an empty Dynamic RDF group on the source and target arrays
- D. Zones the application host initiators to the target array

Correct Answer: C

QUESTION 4

In an SRDF/Metro environment, where is the vWitness lock service, -storwlsd, running?

- A. On the vWitness instance
- B. On the target array
- C. On the source array
- D. On the production host

Correct Answer: A
