QUESTION 1

Which of the following is a characteristic of predictive planning approach?

- A. Activities are divided into iterations
- B. Requirements are gathered through team interaction and feedback
- C. Tasks are performed recurrently
- D. Information is captured in standardized templates

Correct Answer: D

Business analysis information may be captured in a formal document or set of representations following standardized templates.

QUESTION 2

The requirements elicitation technique used to iteratively validate the needs of stakeholders that interact with the application is:

- A. interface analysis
- B. observation.
- C. prototyping
- D. reverse engineering.

Correct Answer: C

4. Elicitation and Collaboration

4.2 Conduct Elicitation

4.2.6 Techniques

Prototyping: used to elicit and validate stakeholders' needs through an iterative process that creates a model of requirements or designs.

QUESTION 3

While assessing requirements changes, a business analyst (BA) will determine the formality of the assessment process based on:

- A. governance approach.
- B. business analysis approach.
- C. change strategy.

D. potential value.

Correct Answer: A

Business analysts will determine the formality of the assessment process based on the information available, the apparent importance of the change, and the governance process. Many proposed changes may be withdrawn from consideration or declined before any formal approval is required. A predictive approach may indicate a more formal assessment of proposed changes.

QUESTION 4

What happens when either the number of requirements or level of formality increase?

- A. Developing new requirements becomes difficult.
- B. More time is required to complete the project.
- C. More effort is needed to trace requirements.
- D. Rejecting requirements is likely to increase.

Correct Answer: C

QUESTION 5

When defining the requirements architecture, a business analyst (BA) examines the relationships among requirements to ensure that they satisfy the following quality criteria:

- A. prioritized, understandable, familiar, kinesthetic, visual.
- B. defined, necessary, correct, unambiguous, consistent.
- C. value-add, functional, auditable, edited, approved.
- D. atomic, complete, concise, feasible, testable.

Correct Answer: B

Business analysts examine each relationship to ensure that the relationships satisfy the following quality criteria:

1.

Defined: there is a relationship and the type of the relationship is described.

2.

Necessary: the relationship is necessary for understanding the requirements holistically.

3.

Correct: the elements do have the relationship described.

4.

Unambiguous: there are no relationships that link elements in two different and conflicting ways.

5.

Consistent: relationships are described in the same way, using the same set of standard descriptions as defined in the viewpoints.
