QUESTION 1

Each morning GIS analyst receives a new shapefile that needs to be migrated into an enterprise geodatabase as a new feature class.

Which data transfer method should the GIS analyst use?

- A. Simple Data Loader
- B. Object Loader
- C. Feature Class to Feature Class
- D. Append

Correct Answer: A

QUESTION 2

In which table is the geometry for a feature class created using a Native-RDBMS spatial type

- A. Feature
- B. Business
- C. Repository
- D. Deletes

Correct Answer: B

QUESTION 3

GIS analysts frequently report degraded performance when working with data in an enterprise geodatabase. The analysts work with non-versioned data and use database views for reference data. Which new workflow should the GIS administrator use to improve performance for the analysts?

- A. Use AcrCatalog to register the views with the geodatabase.
- B. Register the feature classes as versioned.
- C. Use ArcMap to join reference data to the feature classes.
- D. Create relationships classes on the features to include the referenced data.

Correct Answer: B

QUESTION 4

A GIS administrator needs to give users access to only subset of parcel feature and field as well as tax record information from a non-spatial table. Users must be denied access to sensitive information in each table.

What should the administrator choose to meet these requirements?

- A. Database view
- B. Query layer
- C. Relationship class
- D. ArcMap joins

Correct Answer: B

QUESTION 5

A company needs to use on-way replication to synchronize edits from its child geodatabase to its read-only parent geodatabase. Only one editor will be responsible for editing the child geodatabase.

Which option should company use for the child?

- A. Personal geodatabase
- B. File geodatabase
- C. Desktop geodatabase
- D. ArcGIS Data Store

Correct Answer: A
