QUESTION 1

Which of the following statements about the reliability requirement level are true? (Choose three.)

- A. Faults seldom occur in the system software or hardware.
- B. System functions are affected by faults.
- C. System functions are affected by faults but can rapidly recover.
- D. System functions can be ensured by using redundancy design, switchover policy, and high success rate in switchover.

Correct Answer: ACD

QUESTION 2

OSPF supports two authentication modes: area authentication and interface authentication. The two authentication modes cannot be configured at the same time.

- A. True
- B. False

Correct Answer: B

QUESTION 3

When the DHCP relay receives a DHCP request message in which the giaddr (gateway IP address) field is 0, how does the DHCP relay process the DHCP request message?

- A. The DHCP relay fills its IP address in the giaddr field and transmits the DHCP request message to the DHCP server in unicast mode.
- B. The DHCP relay fills its IP address in the giaddr field and transmits the DHCP request message in broadcast mode.
- C. The DHCP relay retains the value of the giaddr field and transmits the DHCP request message to the DHCP server in unicast mode.
- D. The DHCP relay retains the value of the giaddr field and transmits the DHCP request message in broadcast mode.

Correct Answer: A

QUESTION 4

According to the MSTP protocol, each MST instance calculates an independent spanning tree by using the RSTP algorithm.

- A. True

B. False

Correct Answer: A
