HCIP-WLAN-CEWA V1.0

## Pass Huawei H12-321 Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

<https://www.passapply.com/h12-321.html>

100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Huawei  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Which of the following statements is FALSE about the AD and LDAP servers?

- A. The AD server is a dedicated directory server for the Windows Server.
- B. LDAP can be installed on the Windows Server.
- C. The AD server uses the AD directory service protocol.
- D. The AD server uses the LDAP directory service protocol.

Correct Answer: C

---

### QUESTION 2

What is the correct description about the second Fresnel zone below?

- A. If the RF signal is at the same frequency, out of phase, and the intersection of the main signal, the outof-phase signal will weaken or even cancel the main signal. Since the reflection is one of the factors that cause the out-of-phase signal to interfere with the main signal, the point-to-point communication chain is evaluated. When considering the road, the influence of the second Fresnel zone on the signal must be considered.
- B. If the signal of the second Fresnel zone is reflected to the receiving end due to antenna height and terrain, the link quality may be reduced.
- C. The impact of the second Fresnel zone should still be taken into account when planning the network or troubleshooting, especially in flat, arid environments such as deserts.
- D. The first Fresnel zone surrounds the second Fresnel zone.

Correct Answer: ABC

---

### QUESTION 3

What is the correct description of load balancing between dual frequencies?

- A. When the load difference between the 5G and 2.4G radios is within the equalization threshold, the AP will direct the terminal to associate with the 5G.
- B. When the load on the 5G radio exceeds 2.4G at the equalization threshold, the AP will direct the terminal to associate with 2.4G.
- C. When the load on the 5G radio exceeds 2.4G in the equalization threshold, if the terminal is associated with 5G, the AP will always reject the terminal association until the terminal associates 2.4G.
- D. If the load balancing difference threshold is set to 10, it means that if the number of terminals on the 5G radio exceeds more than 10 of the 2.4G radio, the load between the two frequencies is considered to be unbalanced.

Correct Answer: AB

---

#### QUESTION 4

When installing a long-distance point-to-point RF communication link, if the distance between the transmitting and receiving antennas exceeds several kilometers, consider the influence of the curvature of the Earth?

- A. 3.3km
- B. 5.3km
- C. 7.3km
- D. 11.3km

Correct Answer: D

---

#### QUESTION 5

Which of the following statements is TRUE about the Agile Controller admission control model? (Multiple Choice)

- A. The core of the model is the authorization condition and authorization result.
- B. Currently, only 802.1x and Portal authentication support all conditions in the admission control model.
- C. The authorization elements do not include the IP address range.
- D. Authorization conditions include authorization elements.

Correct Answer: ABD
