QUESTION 1

A company needs to set up a large WLAN network. The current number of employees in the company is large, the amount of business data is large, and there may be a need for WLAN expansion in the later stage. Is the following statement correct?

- A. ACU2 can be selected as the AC for networking.
- B. You can configure VLAN Pool
- C. To ensure wireless network security, you can configure a high security security policy.
- D. AC6005 can be used as the AC for networking.

Correct Answer: ABC

QUESTION 2

What radio calibration measures can be taken to ensure that the APs work at the optimal performance? (Multiple Choice)

- A. AP channel adjustment
- B. APSNR adjustment
- C. AP power adjustment
- D. Dynamic EDCA parameter adjustment

Correct Answer: AC

QUESTION 3

Regarding the 802.1X authentication method, is the following description correct?

- A. 802.1X authentication mode is divided into EAP termination and EAP transparent transmission.
- B. EAP transparent authentication requires the NAS device to identify and resolve key information in the EAP and map it to the RADIUS packet to complete the entire authentication.
- C. EAP termination authentication does not require the NAS to resolve EAP packets. Instead, the EAP is encapsulated in RADIUS packets, so that authentication packets traverse the encapsulated network and reach the authentication server.
- D. EAP transparent authentication is also called EAP relay authentication.

Correct Answer: AD

QUESTION 4

Which of the following statements about HSB channels in HSB mode is FALSE?

- A. It is recommended that an HSB channel between the active and standby ACs be connected through one cable to ensure high reliability.
- B. An HSB group is independent from backup services. An HSB group can work properly with no need to bind to an HSB service.
- C. In VRRP HSB mode, the HSB channel status changes with the VRRP active/standby status.
- D. In dual-link HSB, an HSB channel only functions as a data backup channel and does not have an active/standby status.

Correct Answer: B

QUESTION 5

When an engineer uses the Agile Controller to synchronize data, it is found that some user information cannot be synchronized. The user names that cannot be synchronized are as follows: Jack=boss, Mike=leader, Mary=manager, Ann=girlfriend. The engineer found that these user names and their user groups or OUs did not have the same name. What is the cause of the above problems?

- A. User name is too long
- B. User name is too short
- C. User name appears illegal characters
- D. User name requires number and English composition

Correct Answer: C
