### QUESTION 1

Which of the following are false about OceanStor V3 LUN copy and clone: (multiple choice)

- A. LUN copies and clones have the data of the original volume at the moment when the original data is initiated (or started) for the backup of the original data
- B. LUN copies and clones need to stop the host business during execution
- C. LUN copies and clones can both be executed in the same display
- D. Both LUN copies and clones can be incrementally synchronized

Correct Answer: BD

---

### QUESTION 2

In the N8500 (V200R001) system, when you run the `gabconfig -a` command on a cluster node, the system displays the following figure.

```
N8000V2R1-01-01 # gabconfig -a Port b gen bab409 membership 0123 Port f gen bab412 membership 0123 Port h gen bab40d membership 0123 Port v gen bab40d membership 0123 Port w gen bab40f membership 0123
```

You determine that the heartbeat members of the node is not started, you can use `/etc/init.d/llt start` to try to start it.

- A. True
- B. False

Correct Answer: A

---

### QUESTION 3

VTL 6900 engines A and B nodes form a cluster, on the A, B node between the business bearer and the fault automatically switch, which of the following description is correct? (Multiple choice)

- A. When the node a is found through the `sms -v` command, the status of the IPStor Authentication Module is FAIL. The service of the node A will be from Move to Node B.
- B. unplug the A node power supply, A node's business will automatically switch to the B node
- C. unplug the A node and the backup server network connection, the A node's business will automatically switch to the B node
- D. A, B nodes can work in Active-Active mode, but can only manually achieve the backup service load balancing between A and B nodes

Correct Answer: AD

---
