QUESTION 1

FusionSphere is a unified cloud infrastructure platform for U and CT. Which of the following delivery scenarios does FusionSphere focus on? (Multiple Choice)

- A. Storage virtualization
- B. Server virtualization
- C. Cloud data center
- D. NFVI

Correct Answer: BCD

QUESTION 2

Which of the following statements about deduplication is incorrect?

- A. Deduplication is categorized as source-end deduplication and target-end deduplication.
- B. Source-end deduplication is implemented as follows: At the source end, hash comparison is performed for data blocks to be transferred. If a data block has been transferred, only the corresponding hash index value will be transferred.
- C. Target-end deduplication is implemented as follows: Data is transferred from the source end to the target end. If the target end contains the same data, data duplicates will be deleted, and only the unique data remains.
- D. Both source-end deduplication and target-end deduplication reduce the host CPU performance.

Correct Answer: D

QUESTION 3

What procedures does the data center migration acceptance process consists of? (Multiple Choice)

- A. Acceptance solution provision
- B. Applying for acceptance
- C. Onsite acceptance
- D. Signing the acceptance certificate

Correct Answer: ABCD
