QUESTION 1

Data backup can be used to prevent logical errors such as misoperations and viruses. Data backup ensures that the system can be restored to a correct logical version.

- A. True
- B. False

Correct Answer: A

QUESTION 2

In the cloud data center migration scenario, which of the following statements about configuring eDevLUNs for heterogeneous virtualization is correct?

- A. The read/write policy of eDevLUNs "write-back" applies to random access services, ensuring that data in the cache is cached as long as possible to improve the read hit ratio.
- B. The default read/write policy of eDevLUNs is applicable to common services to balance the hit ratio and disk access performance.
- C. The read/write policy "Pairing" of eDevLUNs applies to sequential access services to release cache resources for other services as soon as possible.
- D. When the eDevLUN reads data, it reads the data to be read from the hard disk in advance based on the specified policy.

Correct Answer: A

QUESTION 3

The private cloud is constructed independently for an enterprise and provides the most effective control over data, security, and service quality. Private clouds can be built by enterprise IT departments or cloud platform service providers. An enterprise can deploy its own network or application services on the cloud platform. Private clouds can be deployed in enterprise data centers or in equipment rooms of cloud platform service providers.

- A. True
- B. False

Correct Answer: B

QUESTION 4

Which of the following is applicable to file-level migration in cloud-data center migration scenarios?

- A. The planned disk space of the destination VM is expanded or reduced compared with that of the source VM

- B. Hosts containing a large number of small files
- C. Ensure that the partition is consistent with that on the source end
- D. Host with high disk usage

Correct Answer: D
