QUESTION 1

In the service migration scenario, which of the following statements about the service switchover procedure is incorrect?

- A. After the new server is enabled; you do not need to change the corresponding record on the DNS server
- B. For all service systems that connect to the source server, set the connection change to the destination server
- C. After the migration, check the system CPU, memory, and network performance and service access
- D. Stop the source server, synchronize data again (prevent new data generated during the migration), and enable the destination server

Correct Answer: D

QUESTION 2

Which of the following is applicable to file-level migration in cloud-data center migration scenarios?

- A. The planned disk space of the destination VM is expanded or reduced compared with that of the source VM
- B. Hosts containing a large number of small files
- C. Ensure that the partition is consistent with that on the source end
- D. Host with high disk usage

Correct Answer: D
