QUESTION 1

An Hitachi Data Systems customer is implementing a TrueCopy Extended Distance solution on an Adaptable Modular Storage (AMS) system. Which configuration is supported?

- A. TrueCopy Extended Distance with 20 Consistency Groups.
- B. TrueCopy Extended Distance Consistency Group pairs in parallel to TrueCopy Synchronous pairs.
- C. TrueCopy Extended Distance Consistency Group with a ShadowImage copy taken from the SVOL.
- D. Two or more TrueCopy Extended Distance Consistency Groups defined with opposite copy direction.

Correct Answer: D

QUESTION 2

What are two purposes of a TrueCopy Asynchronous Consistency Group? (Choose two.)

- A. It controls multiple volume pairs as a single entity.
- B. It provides a real-time copy of the P-VOL on the S-VOL.
- C. It allows priority to be assigned to a group of volume pairs.
- D. It ensures data is written to the S-VOL in a consistent manner.

Correct Answer: AD

QUESTION 3

A customer wishes to create copies using Copy-on-Write SnapShot of a database containing a large number of changes -- about 50 percent for each day. The customer also wants to keep five copies of the database though access to the copies is not high. Which statement is correct?

- A. The pool should reside on external storage to keep costs low.
- B. The pool logical volumes should be the same size as the production logical volumes.
- C. The database should be copied using ShadowImage and not Copy-on-Write SnapShot.
- D. The pool should be at least three times the size of the database if Copy-on-Write SnapShot is used.

Correct Answer: D

QUESTION 4

You have set up a Microsoft Cluster "file share" resource called "EngDep". This is dependent on a physical disk resource called "DiskE" and on a Generic Script resource called "HSCScript", which is the Hitachi Storage Cluster

(HSC) script. In which file is the HORCM instance defined that needs to be active for these resources?

- A. DiskE.conf
- B. horcm0.conf
- C. EngDep.conf
- D. HSCScript.conf

Correct Answer: D

QUESTION 5

A customer has a cascaded Three Data Center (3DC) implementation to protect a mission critical UNIX application. The production host crashes, but the array and network are still up. The customer wants to bring up the application on a host at the local data center and still maintain two remote copies of the data; What must be performed first at the local data center?

- A. Suspend HUR pairs.
- B. Suspend TrueCopy pairs.
- C. Perform swap takeover for the HUR pairs.
- D. Perform swap takeover for the TrueCopy pairs.

Correct Answer: A
