QUESTION 1

What are isotopes?

- A. Elements which have the same number of protons but a different number of neutrons.
- B. Elements with the same atomic number but different atomic mass numbers.
- C. Elements which have a different number of protons than electrons.
- D. Both A and B are correct.

Correct Answer: D

QUESTION 2

Which of the following is true of the axial skeleton?

- A. The facial bones include four nasal bones.
- B. The mandible and maxilla are the only moveable bones of the skull.
- C. Ossicles are a part of the jaw bone.
- D. The axial skeleton consists of a total of 28 bones of the skull.

Correct Answer: D

QUESTION 3

Despite increasing enrollments of women in medical schools, feelings of isolation among women medical students persist. Women students still have to contend with the social stereotype of a male doctor. In addition, institutions themselves may unintentionally foster feelings of separateness. Comparatively few women are hired for faculty positions, thus offering women students few role models. The pervasive sexual humor of male doctors and students further intensifies women students' alienation. Alienation, in turn, negatively affects individual self-perception. As women enter medical study in increasing numbers, they may feel less at odds with their peers and the teaching establishment. Institutional bias will, no doubt, also change in response to evolving societal values. However, we should not wait passively for gradual social processes to bring changes; schools must provide current students with support services designed to meet women's needs. In a recent study, 48 percent of the women questioned rated a student support group as the most important support service a school can provide.

The passage suggests that which of the following would be likely to reduce the isolation felt by women medical students?

- A. An increased proportion of women in medical schools.
- B. A decrease in the number of women filling faculty positions in medical schools.
- C. A decrease in support services available to women students.
- D. A more complete segregation between men and women in medical schools.

Correct Answer: A

QUESTION 4

Which word means "reddened or ruddy appearance"?

- A. Flaccid
- B. Distended
- C. Flushed

D. Lethargic

Correct Answer: C

QUESTION 5

Which lobe of the brain is associated with judgement, planning, impulse control, and social behavior?

A. temporal

B. frontal

C. parietal

D. occipital

Correct Answer: B
