**QUESTION 1**

Alfalfa thrives on land which contains lime, and gives poor results when this ingredient is deficient. The explanation is simple: there is a community of interest between the very low microscopic animal life, known as bacteria, and plant life, generally. In every ounce of soil there are millions of these living germs which have their allotted work to do, and they thrive best in soils containing lime. If one digs up a root of alfalfa (it need not be an old plant, the youngest plant will show the same peculiarity), and care is taken in exposing the root (perhaps the best method is the washing away of the surrounding earth by water), some small nodules attached to the fine, hair-like roots are easily distinguished with the naked eye. These nodules are the home of a teeming, microscopic, industrious population, who perform their allotted work with the silent, persistent energy so often displayed in nature.

Which of the following is an accurate paraphrasing of the underlined phrase?

- A. Many people are intrigued by the relationship between bacteria and plant life.
- B. Bacteria and alfalfa plants have a symbiotic relationship.
- C. Bacteria in alfalfa is worth studying.
- D. The gardening community is very invested in the bacteria found in alfalfa.

Correct Answer: B

QUESTION 2

Which of these is a polar molecule?

- A. CO₂
- B. BF₃
- C. C₆H₆
- D. NH₃

Correct Answer: D

QUESTION 3

Mycology is defined as the study of _____.

- A. parasites
- B. fungi
- C. microorganisms
- D. muscles

Correct Answer: B

QUESTION 4

Which word means "reddened or ruddy appearance"?

- A. Flaccid
- B. Distended
- C. Flushed
- D. Lethargic

Correct Answer: C

QUESTION 5

Despite increasing enrollments of women in medical schools, feelings of isolation among women medical students persist. Women students still have to contend with the social stereotype of a male doctor. In addition, institutions themselves may unintentionally foster feelings of separateness. Comparatively few women are hired for faculty positions, thus offering women students few role models. The pervasive sexual humor of male doctors and students further intensifies women students' alienation. Alienation, in turn, negatively affects individual self-perception. As women enter medical study in increasing numbers, they may feel less at odds with their peers and the teaching establishment. Institutional bias will, no doubt, also change in response to evolving societal values. However, we should not wait passively for gradual social processes to bring changes; schools must provide current students with support services designed to meet women's needs. In a recent study, 48 percent of the women questioned rated a student support group as the most important support service a school can provide.

In terms of its tone and form, the passage is most appropriately described as

- A. an impassioned polemic
- B. an indignant protest
- C. a reasoned appeal
- D. a detached summary

Correct Answer: C
