QUESTION 1

Which primary benefit does HP Service virtualization provide to the director of quality assurance?

- A. Virtualization improves test execution efficiency by removing scheduling constraints from the testing team
- B. Virtualization directly affects customer satisfaction in case of system outages or degraded levels of operations.
- C. Virtualization reduces IT costs and helps to modernize applications
- D. Virtualization improves customer quality, improving collaboration.

Correct Answer: A

QUESTION 2

Which discovery question will likely assist in understanding an organization's pain point that can be addressed by an HP Lifecycle Management solution?

- A. Is it difficult for the organization to monitor application performance and availability in real time?
- B. Are organizational silos impeding the process of planning, delivery, and hand off to operations?
- C. Can project and portfolio management be leveraged to improve business results?
- D. Is it difficult for the organization to monitor user mobile application performance and availability in real time?

Correct Answer: B

QUESTION 3

How does the HP Quality Management solution help customers?

- A. by bringing visibility and control to their quality assurance programs
- B. by reducing or eliminating redundant overlapping processes
- C. by finding network bottlenecks and identifying root cause of failure
- D. by identifying which software projects to outsource and which to build internally

Correct Answer: A

QUESTION 4

Which capability of HP Application Lifecycle Management differentiates it from competitors by providing visibility into key project milestones and automatically updates project status against those milestones?

- A. requirements management
- B. project planning and tracking
- C. process enablement
- D. application lifecycle intelligence

Correct Answer: D

QUESTION 5

Why is the concept of Continuous Integration and Testing important to the Agile conversation?

- A. Merely increasing the pace of development without addressing the full software development lifecycle will cause bottlenecks in other aspects of the lifecycle.
- B. It increases the total number of sprints required to complete a software project and will reduce delivery costs and increase quality.
- C. It gives organizations the ability to align business processes and functional testing with performance and security testing to ensure better quality.
- D. It increases the total number of sprints required to complete a software project and will reduce delivery costs and increase quality.

Correct Answer: D
