QUESTION 1

A company decides to use the local portal server function on the HP Unified Wired-WLAN controller. Which rule applies when customizing the default authentication pages?

- A. Do not modify the logon failure page.
- B. The authentication page files must not exceed 50 MB.
- C. Do not change the names of the main authentication page files.
- D. Do not compress the authentication page files.

Correct Answer: C

QUESTION 2

A business deploys a wireless network that includes an HP 10500/7500 module and 120 access points (APs). They plan to increase the number of APs to 250. Which step must be performed in order to register the upgrade's license management feature?

- A. On the controller, in System view, enter the command license register AP.
- B. On the controller, in User view, enter the command license register AP.
- C. On the controller, in the My Networking Windows, select the update licenses option.
- D. On the controller, in License view, enter the command register AP.

Correct Answer: B

QUESTION 3

An organization wants to upgrade their wireless network to allow employees to connect using their 802.11ac enabled devices. Which HP access points meet this requirement?

- A. HP 425
- B. HPMSM466
- C. HP MSM430
- D. HP 560

Correct Answer: D

QUESTION 4

A company plans to deploy an HP MSM wireless network. The company currently has a RADIUS server that is used to

control employee access to the company\\'s Intranet from wired clients. They want to use the same RADIUS server to control employee\\'s access from wireless clients.

The company also wants to allow guests to connect to the wireless network. They want to allow the guests to reach the Internet, but they want to make sure that guests cannot reach the company\\'s Intranet.

Based on these requirements, which traffic optimization scheme should be implemented?

- A. Deploy distributed forwarding for employees and distributed forwarding with centralized authentication for guests.
- B. Deploy distributed forwarding for employees and centralized access control for guests.
- C. Deploy centralized access control for employees and distributed forwarding with centralized authentication for guests.
- D. Deploy centralized access control for employees and distributed forwarding for guests.

Correct Answer: C

QUESTION 5

A network administrator is setting up a wireless network secured by 802.1X authentication in EAP mode with an HP BYOD solution. What is an important concept to remember when configuring a Windows laptop to access the wireless network?

- A. Root certificates from a Certificate Authority are not needed. The laptop will validate the RADIUS certificate using its client certificate.
- B. Do not validate any certificates sent by the RADIUS server. This may cause security issues.
- C. User Access Manager can self-generate its own certificate, and this kind of certificate does not need any validation.
- D. To automatically validate a certificate sent by User Access Manager (UAM), a client must have a root certificate from the Certificate Authority that issued the UAM certificate

Correct Answer: A
