QUESTION 1

How does an HP BYOD implementation differ from a simple MAC authentication?

- A. In MAC authentication, the MAC address exists as an account in the User Access Manager database. In BYOD, the MAC address of an endpoint is learned during registration.
- B. In MAC authentication, the MAC address exists as an account in the User Access Manager database. In BYOD, a successful MAC authentication of an endpoint must precede the registration of a user account.
- C. In MAC authentication, the MAC address exists as an account in the User Access Manager database. In BYOD, the MAC address of an endpoint does not need to be learned; the user account is what matters.
- D. In MAC authentication, the MAC address is learned during the first authentication. In BYOD, the MAC address of an endpoint is learned during registration.

Correct Answer: A

QUESTION 2

Which statement is correct about security on a wireless network?

- A. 802.1X with EAP-TLS mode provides encryption without authentication.
- B. In MAC authentication, the MAC address can be spoofed.
- C. 802.1X with PEAP MSCHAPV2 provides authentication without encryption.
- D. MAC authentication provides encryption.

Correct Answer: B

QUESTION 3

A company decides to use the local portal server function on the HP Unified Wired-WLAN controller. Which rule applies when customizing the default authentication pages?

- A. Do not modify the logon failure page.
- B. The authentication page files must not exceed 50 MB.
- C. Do not change the names of the main authentication page files.
- D. Do not compress the authentication page files.

Correct Answer: C

QUESTION 4

What are valid ways to create a guest account in an HP BYOD solution? (Select three.)

- A. Guests register themselves and are automatically validated.
- B. Guests use the BYOD self-registration page and are later validated by corporate IT staff.
- C. Guests use the default BYOD user to register automatically.
- D. Guest Managers create the guest accounts.
- E. Corporate users create the guest accounts.
- F. Guests use the BYOD self-registration page and are later validated by Guest Manager.

Correct Answer: ABF

QUESTION 5

In 802.1XEAP-TLS, how can a network administrator control network access of corporate users?

- A. by selecting which user groups are entitled to deploy a certificate on their endpoints
- B. by selecting which endpoints are entitled to install a certificate
- C. by defining corporate users as guests
- D. by disabling or deleting the user's endpoint in User Access Manager

Correct Answer: B
