### QUESTION 1

Your backup strategy incorporates an HPE StoreOnce 6500 Backup System and HPE Data Protector software to backup your customer's 100 percent VMware virtualized environment. Which advantage do HPE Data Protector virtual full backups provide to this design?

- A. virtual machine granular restores
- B. efficient synthetic backup
- C. direct VMware virtual machine backup
- D. two identical sets of data on separate disks

Correct Answer: B

---

### QUESTION 2

Which capability is available to use with HPE StoreEver tape libraries, along with software drivers that provide MPIO?

- A. partitioning of tape libraries
- B. backups through Fibre Channel
- C. advanced path failover
- D. offloading backups to tape

Correct Answer: C

---

### QUESTION 3

Your solution design includes a new HPE StoreOnce backup System. Your customer is concerned that you will not get the deduplication ratios you have stated. Which resource should you use to verify the expected deduplication ratios?

- A. HPE StoreOnce VSA in No Data mode +
- B. HPE Storage Optimizer
- C. HPE NinjaThin Assessment
- D. HPE Storage Sizer tool

Correct Answer: C

---

### QUESTION 4

Which resource should be used to validate support of an HPE MSL 6480 tape library for a specific backup application?

- A. HPE MSL6480 QuickSpecs
- B. HPE Storage Sizing tool +
- C. HPE StoreEver Tape Library Drive Upgrade Matrix
- D. HPE Data Agile BURAs Compatibility Matrix

Correct Answer: D

---

#### QUESTION 5

A customer with a LAN/SAN environment is considering HPE 3PAR for an upcoming storage refresh, but has a tight budget. The customer needs 200 TB of Fibre Channel- attached, very low latency, block-storage for application servers, and 10 TB of LAN- attached storage for end-user file/file shares for about 100 end-users. They want to use as much of their existing systems as possible and would like to continue using the ISV backup system installed last year to back up the block-based and file/file share data and files, respectively.

The customer sees a presentation that includes details on the HPE 3PAR File Persona features and they like the idea of consolidating their Fibre Channel and LAN-based storage onto one storage platform. You deliver technical presentations on the HPE StoreOnce and StoreEver backup offerings. The customer asks for an HPE 3PAR solution proposal that includes provisions for backup-to-local disk and tape of all SAN-attached data, and minimal backup-to-disk for all LAN-attached data.

Your sales team is proposing a combined HPE 3PAR StorServ 8000, HPE StoreOnce Backup System, and HPE StoreEver solution and is working on the HPE 3PAR configuration. You are developing the proposals for the HPE StoreOnce and HPE StoreEver configurations. While analyzing ways to reduce costs, you determine that the customer's backup windows are achievable with either their Fibre Channel SAN or Ethernet environment.

Which additional information should you obtain to enable you to recommend the most cost- effective solution?

- A. What is the skill level of the backup administrators?
- B. How much power and floor/rack space will the new proposed solution require?
- C. Does the customer's ISV Backup System support iSCSI?
- D. Does the customer's ISV Backup System support NDMP?

Correct Answer: D
