QUESTION 1

An architect needs to design a solution for a customer that stores all data on third-party NAS storage, and that does not yet have a database solution. The new HPE-based solution must be optimized for data mining.

How can the current data stored on the NAS be used for data mining?

- A. connecting the database to the NAS as main storage by using a TOE Host Bus Adapter
- B. using the database application import functionality to migrate the data from the NAS to block-level storage for processing
- C. attaching the database directly to the NAS storage by using a Fibre Channel Host Bus Adapter and by using the NAS for all DB tables
- D. attaching the database directly to the NAS storage by using an iSCSI Host Bus Adapter and by using the NAS for all DB tables

Correct Answer: B

QUESTION 2

An architect proposes an HPE Moonshot solution with three HPE Moonshot 1500 Chassis as follows: - one chassis with 30 m710 cartridges

-two chassis with 30 m800 cartridges each

The customer wants to change the solution to use two HPE Moonshot 1500 chassis as follows:

- one chassis with 30 m710 cartridges and 15 m800 cartridges - one chassis with 45 m800 cartridges

What should the architect explain to the customer?

- A. Mixing different models of cartridges in the same chassis is not supported
- B. A chassis can support both m710 and m800 cartridges, but the m710 cartridges will not be able to use their accelerators
- C. Mixing different models of cartridges requires the customer to use an HPE Moonshot Provisioning Manager (MPM)
- D. A chassis can support both m710 and m800 cartridges, but the m710 cartridge adapters will operate at 1Gbps rather than 10Gbps

Correct Answer: B

QUESTION 3

A customer needs an HPE Apollo 6000 solution and Remote Direct Memory Access (RDMA). Which network interconnects should the architect recommend for this solution? (Choose two.)

- A. 1 GbEthernet

- B. Infiniband
- C. FlexFabric
- D. 16 Gb Fibre Channel
- E. 12G SAS

Correct Answer: AB

QUESTION 4

A customer's Gen9 web server resides behind a firewall.

What is the most secure and efficient method to monitor this server?

- A. Use Intelligent Provisioning.
- B. Use Agentless Management.
- C. Create Firewall rules and install System Management Homepage in Protected Mode.
- D. Create Firewall rules and install WBEM.

Correct Answer: D

QUESTION 5

A customer plans to use Insight Control server provisioning and HPE OneView for vCenter Server. The vCenter Server manages one c7000 enclosure with 16 server blades running VMware ESXi. Which licensing option should the architect include in the proposal?

- A. one HPE OneView Standard license for each managed server and one HPE OneView for vCenter Server license for the c7000 enclosure
- B. one Insight Control server provisioning license for each managed server
- C. one Insight Control server provisioning license for each managed server blade and one HPE OneView for vCenter Server license for the entire c7000 enclosure
- D. one HPE OneView Advanced license for each managed server

Correct Answer: C
