**QUESTION 1**

DRAG DROP

Arrange the host server writing process in a 3PAR asynchronous streaming onsite remote copy environment in the correct order.

Select and Place:

**Host Server Writing Process**

- Acknowledgement is sent to the host resulting in low latency from the host to the system.
- Write cache pages are coalesced into tickets that describe IO order and are replicated to second system.
- Write IO is replayed in order on the secondary system to ensure consistency with the primary.
- Writing issued from the host server is stored in the local array's cache.

**Order**

Correct Answer:

**Host Server Writing Process**

**Order**

- Write cache pages are coalesced into tickets that describe IO order and are replicated to second system.
- Writing issued from the host server is stored in the local array's cache.
- Acknowledgement is sent to the host resulting in low latency from the host to the system.
- Write IO is replayed in order on the secondary system to ensure consistency with the primary.

**QUESTION 2**

Which type of backup is used when you configure and activate RMC protection for the first time?

- A. Differential Backup
- B. Image Backup
- C. Full Backup

D. Incremental Backup

Correct Answer: A

---

### QUESTION 3

Which technology is designed for customers who own HPE StoreOnce and HPE 3PAR StoreServ, and want to recover mission-critical application data more rapidly or frequently than what the traditional backup applications?

- A. HPE Remote Copy
- B. HPE Virtual Machine Explorer
- C. Application consistent snapshots
- D. HPE RMC Express Restore

Correct Answer: A

---

### QUESTION 4

In the Oracle database environment, how can 3PAR Priority Optimization help to improve the application?

- A. Setting the IOPS increases the throughput of data per second, thus decreasing the completion time of databases queries.
- B. Setting the response time or latency improves transaction times in the database.
- C. Setting the bandwidth controls the IOPS, thus only applying to OLTP workloads.
- D. Setting the bandwidth reduces the wait time of the storage responding to the server request.

Correct Answer: A

---

### QUESTION 5

What is the recommended multipathing configuration between the host and arrays during the Admit stage of the Peer Motion unidirectional migration?

- A. most recently used
- B. round robin with QoS detection
- C. one primary active path with others on stand-by
- D. round robin with load balancing

Correct Answer: C
