QUESTION 1

An administrator sets up a master-local topology. The administrator disables control plane security (CPSec) on all of the controllers and then configures the master and local controllers. Which protocol will be used between these controllers to tunnel management traffic once the inter-controller configuration has been completed?

- A. HTTPS
- B. GRE
- C. IPSec
- D. SSH

Correct Answer: B

QUESTION 2

Which parameter(s) does a Master controller use to determine where a provisioned AP should terminate its GRE tunnel?

- A. the IP address of the AP
- B. the MAC address of the AP
- C. the IP address of the switch nearest to the AP
- D. the name and group settings of the AP
- E. the VLAN the AP is attached to

Correct Answer: D

QUESTION 3

An administrator manages a network that includes three campuses. The network uses Aruba Mobility Controllers and Aruba Aps. Each campus is managed separately, where each campus has its own master-local topology. The administrator wants to simplify the operations of control plane security (CPSec) to allow Aps to be centrally provisioned but can be placed in any campus.

What must the administrator do to allow an AP to securely connect to any controller in any campus?

- A. Set up a third-party solution to provide root certificate Authority (CA) and subordinate CA services.
- B. Set up three cluster domains with a single CPsec Trust Anchor for the entire network
- C. Set up one master controller as a CPsec Trust Anchor and the other master controllers as cluster members.
- D. Set up master controller as a CPsec Trust Anchor at each of the three campuses.

Correct Answer: C

QUESTION 4

Where should mobility domains be enabled in a network with 1 master, 1 backup master and 5 local controllers?

- A. Only on the master controller
- B. All the local controllers in the network
- C. All the controllers where the client is allowed to roam
- D. Master and backup master
- E. Only on the backup master

Correct Answer: C

QUESTION 5

The corporation has deployed hundreds of RAP3 and all are working. A user has received a RAP3 from the IT department. At his home he connects the Ethernet port to his DSL modem. The corporate SSID is not advertised but an Instant SSID is. What could be the problem?

- A. This RAP was purchased as an IAP and not as a RAP
- B. The activate server does not have this RAPs configured
- C. The corporate Firewall is blocking VPN
- D. The RAP3 must be pre-staged
- E. The user must connect his laptop, get the Zero touch window and enter the URL

Correct Answer: B
