QUESTION 1

A company has a Mobility Master (MM)-based solution. A network administrator wants to monitor data transfer speed ranges of all currently connected clients.

Which dashboard page in the MM interface should the administrator visit?

- A. Security
- B. Performance
- C. Traffic Analysis
- D. Network

Correct Answer: B

QUESTION 2

What are two criteria that distinguish different Aruba Mobility Controller (MC) models from each other?

- A. firewall speed and ability to act as a standalone controller or not
- B. number of supported users and firewall throughput
- C. number of supported APs and ability to support 802.11ac APs or not
- D. number of supported users and ability to support 802.11ac APs or not

Correct Answer: B

QUESTION 3

A WLAN in an Aruba Mobility Master (MM)-based solution uses WPA2-Enterprise security. This WLAN currently authenticates users to Active Directory (AD), and users log in with their Windows domain credentials. Network administrators now want to authenticate the Windows clients as well, based on the client Computer Names.

What should the administrators do on MM to achieve this goal?

- A. Set up Machine Authentication on the WLAN.
- B. Set up Mac Authentication on the WLAN.
- C. Bind individual Mobility Controllers (MCs) to AD at the device level.
- D. Import the computer names from AD to the MM internal database.

Correct Answer: B

**QUESTION 4**

Refer to the exhibit.

The screenshot shows the Aruba configuration interface for the 'Exam_Employee' profile. The 'Profiles' tab is selected. On the left, under 'Profiles for WLAN Exam_Employee', the 'AAA' profile is highlighted. The main configuration area for the 'AAA Profile: Exam_Employee' shows the following settings:

- AAA Profile: Exam_Employee (dropdown)
- Initial role: logon (dropdown)
- Mac Authentication Default Role: guest (dropdown)
- 802.1X Authentication Default Role: authenticated (dropdown)
- Download Role from CPPM: ☒
- Set username from dhcp option 12: ☐
- L2 Authentication Fall Through: ☐
- Multiple Server Accounting: ☐

The exhibit shows the AAA profile for a WLAN on an Aruba solution. This WLAN uses 802.1X to authenticate users to a RADIUS server. A user successfully authenticates with 802.1X, but the RADIUS server does not send a role assignment.

How does the Aruba firewall handle the role assignment for this user?

- A. It does not assign a role.
- B. It applies the Aruba VSA role employee.
- C. It assigns the logon role.
- D. It assigns the authenticated role.

Correct Answer: D

QUESTION 5

Which task can an Aruba Air Monitor (AM) perform?

- A. Analyze wireless traffic patterns at the application level.

- B. Optimize RF through the AP channel and transmit power plans.
- C. Analyze RF signals to determine the cause of non-802.11 interference.
- D. Prevent client connections to rogue APs.

Correct Answer: D
