### QUESTION 1

An administrator manages an Aruba wireless solution, deployed in a company with locations across the world. In one country, the local government organization that controls wireless transmissions increases the maximum EIRP allowed for certain channels.

Which component does the administrator need to update on the Mobility Master (MM) to accommodate this change?

- A. the Controller port configuration
- B. the regulatory-cert file
- C. the AP system profile
- D. the AP Group configuration

Correct Answer: C

---

### QUESTION 2

An administrator deploys an AP at a branch office. The branch office has a private WAN circuit that provides connectivity to a corporate office controller. An Ethernet port on the AP is connected to a network storage device that contains sensitive information. The administrator is concerned about sending this traffic in clear-text across the private WAN circuit.

What can the administrator do to prevent this problem?

- A. Redirect the wired port traffic to an AP-to-controller GRE tunnel.
- B. Convert the campus AP into a RAP.
- C. Enable AP encryption for wired ports.
- D. Enable IPSec encryption on the AP's wired ports.

Correct Answer: D

---

### QUESTION 3

An administrator implements blacklisting of users that fail authentication functions three or more times. By default, how long will these users have to wait before they can successfully log into the network again?

- A. 15 minutes
- B. 1 hour
- C. 4 hour
- D. 24 hours

Correct Answer: D

---

#### QUESTION 4

What are the responsibilities of a cluster leader in a cluster of Aruba Mobility Controllers (MCs)? (Choose two.)

- A. To identify primary and secondary Mobility Controllers for APs
- B. To create a table to determine how a wireless client maps to a cluster member
- C. To identify a backup cluster leader for redundancy
- D. To manage the configuration of cluster members
- E. To automatically load balance clients if the load across cluster members changes

Correct Answer: AE

#### QUESTION 5

An administrator supports an Aruba wireless solution that uses ClearPass to implement server role assignment. A user reports that they are not able to access the correct department resources. The administrator determines from the connected controller that the user is associated to the login user profile instead of the department user profile.

What should the administrator examine on the ClearPass server to determine the Aruba VSA User Role value that ClearPass returns to the controller?

- A. Accounting
- B. Event Viewer
- C. Audit Viewer
- D. Access Tracker

Correct Answer: D
