QUESTION 1

An administrator wants to implement the MultiZone feature in a company's network to segregate corporate and guest traffic. Corporate traffic will have APs establish connections to a cluster managed by a Mobility Master (MM), and guest traffic will have the same APs establish connections to a standalone controller at the company's DMZ.

What is true about the implementation of MultiZones in this scenario?

- A. The MultiZone feature must be enabled in the data zone.
- B. The primary zone maintains full control of AP management and configuration.
- C. The primary and data zones must be in the same L2 subnet.
- D. A MultiZone AP can initially connect to any zone to obtain its configuration.

Correct Answer: B

QUESTION 2

An administrator moves an AP from one campus to another. However, at the second campus, the moved AP does not connect to a controller and download an AP Group configuration.

Which process should the administrator perform to reset the AP to the initial state?

- A. From the controller's CLI, reboot the AP.
- B. From the AP's CLI apboot mode, execute a factory reset.
- C. From the controller's CLI, stop the autoboot process of the AP.
- D. From the AP's CLI, toggle POE on the AP's port.

Correct Answer: B

QUESTION 3

An administrator inherits an Aruba Mobility Controller (MC) that has an unknown username and password. Which credentials should the administrator enter to reset the administrative access?

- A. Username: backdoor; Password: @ruba
- B. Username: admin; Password: admin
- C. Username: password; Password: forgetme!
- D. Username: Aruba; Password: Reset!

Correct Answer: C

QUESTION 4

An administrator wants to reduce downtime of the wireless network when controllers are upgraded. Which Aruba OS feature should the administrator implement to reduce the amount of downtime the Aps will experience at the time of the upgrade process?

- A. Centralized upgrades
- B. AP apboot mode bypass
- C. AP fast start
- D. AP image preload

Correct Answer: D

QUESTION 5

An administrator adds local administrative accounts to manage the Aruba Mobility Controllers (MCs). Which role should be assigned to an administrator who needs to only generate reports and monitor WLANS and ports?

- A. Location-api-management
- B. Network-operations
- C. Root
- D. AP-provisioning

Correct Answer: B
