Exhibit: accp67-433

Based on the configuration of me create\_user form shown, which statement accurately describes the status?

- A. The email field will be visible to guest users when they access the web login page.
- B. The visitor\_company field will be visible to operators creating the account.
- C. The visitor\_company field will be visible to the guest users when they access the web login page.
- D. The visitor\_phone field will be visible to the guest users in the web login page.
- E. The visitor\_phone field will be visible to operators creating the account.

Correct Answer: A

---

### QUESTION 3

An administrator implements the MultiZone feature and uses two clusters that utilize CPsec. A primary and a data zone are created. MultiZone APs successfully build sessions to the primary cluster but fail to establish sessions to the data zone cluster.

What must the administrator do to solve this problem?

- A. Enable CPsec in the MultiZone profile for both the primary and data zone.
- B. Enable MultiZone booting in the MultiZone AP apboot configuration mode.
- C. Add the MultiZone APs to the data zone's CPsec whitelist.
- D. Use different AP Group names for the two zones.

Correct Answer: D

---

### QUESTION 4

An administrator creates service-based policies for AirGroup on the Mobility Master (MM). The administrator can define location-based policy limits based on which information?

- A. AP names, AP groups, controller names, and controller groups
- B. AP Fully Qualified Location Names (FQLNs) and controller Fully Qualified Domain Names (FQDNs)
- C. AP names, AP groups, and AP Fully Qualified Location Names (FQLNs)
- D. Controller names, controller groups, and controller Fully Qualified Domain Names (FQDNs)

Correct Answer: C

---

### QUESTION 5

Refer to the exhibit.

Identity	
These options control the generation of device credentials	
* Certificate Authority:	Local Certificate Authority ▼ Select the certificate authority that will be used to sign profiles and messages.
* Signer:	Onboard Certificate Authority ▼ Select the source that will be used to sign TLS client certificates.
* Key Type:	1024-bit RSA – created by device ▼ Select the type of private key to use for TLS certificates.
* Unique Device Credentials:	<input checked="" type="checkbox"/> Include the username in unique device credentials When checked, the username is prefixed to the device's PEAP credentials. This unique set of credentials is used to identify the user and device on the network.

Exhibit: accp67-531

Based on the configuration for the client's certificate private key as shown, which statements accurately describe the settings? (Select two.)

- A. More bits in the private key will increase security.
- B. The private key for TLS client certificates is not created.
- C. The private key is stored in the ClearPass server.
- D. More bits in the private key will reduce security.
- E. The private key is stored in the user device.

Correct Answer: AE
